Supplemental Figure 1. Gene expression profiling of the small intestine after dietary treatment with or without LPS challenge (a) Venn diagram illustrations of genes found to be differentially expressed with or without LPS challenge in the small intestine. The common genes from the RNAseq experiment were upregulated at least 2-fold ($P < 0.05$). (b) Gene Ontology (GO) enrichment analysis of differentially expressed genes. GO terms assigned to biological process, cellular component, and molecular functions. (c) Kyoto Encyclopedia of Genes and Genomes (KEGG) pathway classification enrichment analysis of differentially expressed genes.
