

Supplementary Data

SUPPLEMENTARY FIG. S1. Evaluation of de/inhibition using the elevated plus maze at 12 month post mild traumatic brain injury (mTBI). **(A)** There was no difference in the amount of time spent in the open arm across all groups. **(B)** Representative tracks plot for each group. The velocity of each animal is represented by a color gradient from yellow (0 cm/sec) to red (15 cm/sec). Data are presented as mean \pm standard error of the mean. $n=9$ per group.
