

**Online Resource 6 -- Supplemental Figure 5.** Average percentages of Ng2+ pericyte coverage on Day 10 (n=3 of biological replicates) WT and *Flt1*<sup>-/-</sup> ESC derived vessels treated with DMSO vehicle control (black bars) or the Notch inhibitor DAPT (blue bars) conditions. Values are averages + Standard Error of the Mean (SEM). No statistically significant differences were found.

Excess Vascular Endothelial Growth Factor-A Disrupts Pericyte Recruitment during Blood Vessel Formation. *Angiogenesis*. Jordan Darden, Laura Beth Payne, Huaning Zhao, John C. Chappell.
