

Figure.S19: This is the fold change enrichment version of Fig.6a. The enrichment of different classes of AR/ERG binding sites in diverse GWAS traits. Upper panel: Considering the regions with AR/ERG chromatin looping, and further breaking down to AR-ERG co-binding sites (green), AR only binding sites (red), and ERG only binding sites(blue) overlapping GWAS top loci. Lower panel: similar to upper panel, but considering only regions without AR/ERG chromatin looping.
