

## Supplementary Information

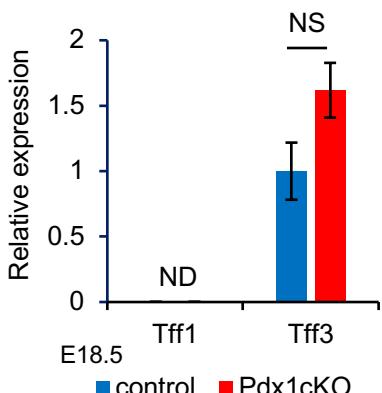

Exocrine tissue-driven TFF2 prevents  
apoptotic cell death of endocrine lineage  
during pancreas organogenesis

A

B

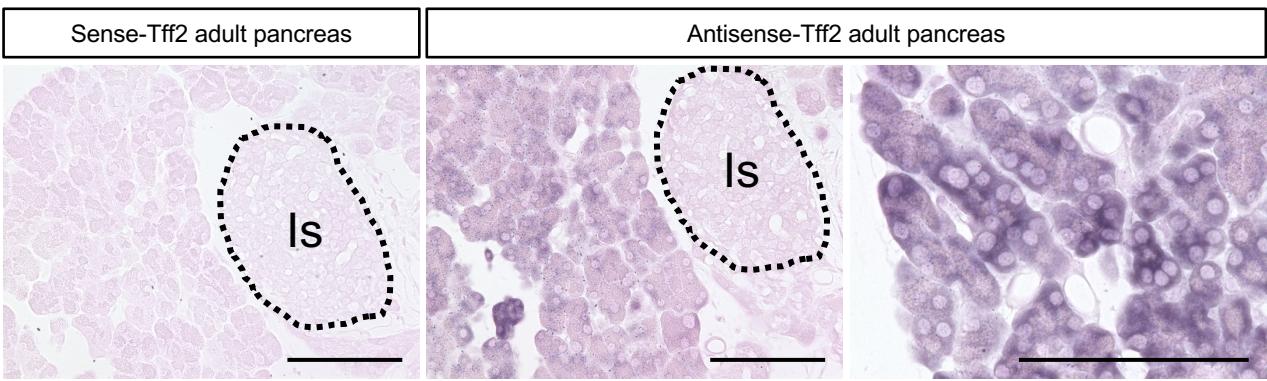

C

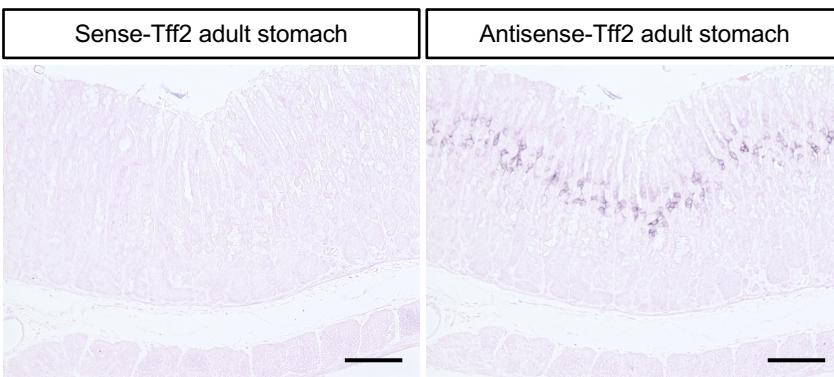

**Supplementary Figure S1. The expression of *TFF* family in mice pancreas by RT-PCR.**

(A) The expression of *TFF2* mRNA detected by RT-PCR at P1 in control and Pdx1cKO mouse pancreata. St: stomach of WT mice (positive control), In: small intestine of WT mice (negative control). (B) The relative expressions of *TFF1* and *TFF3* mRNA at P1 in both pancreata. (C) Original RT-PCR data of Figure 1A. Approximate regions used for figures are marked with rectangles. The ladder shows markers every 100 bp. The bottom band is 100 bp. Bars represent the mean  $\pm$  SE.

A

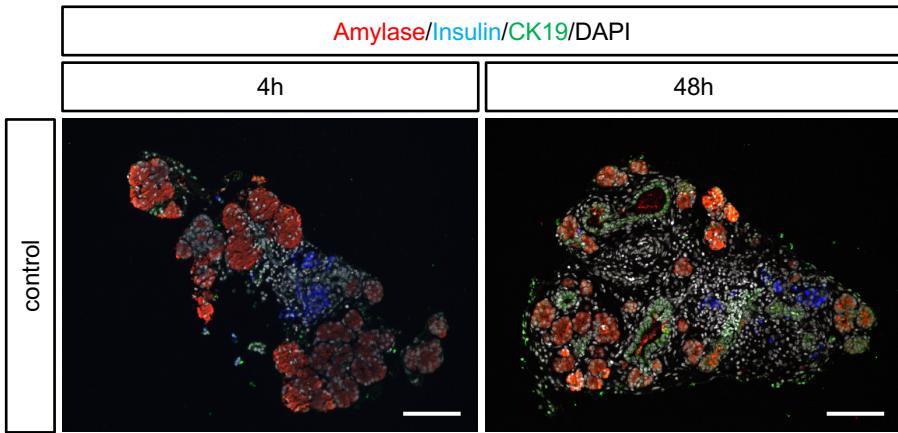

B

**Supplementary Figure S2. Localization of *TFF2* mRNA in control adult mice.**

The localization of endogenous *TFF2* by in situ hybridization on sections of pancreas and stomach in control mice. (A) *TFF2* mRNA is detected in acinar of adult mice pancreas (middle and right panel) by an anti-sense probe. *TFF2* mRNA expression is hardly observed in adult mice islet. Left panel shows negative control with a sense probe. Is: Islet. (B) *TFF2* mRNA was detected in mucous neck cells of adult mice stomach (right panel). Left panel shows negative control with a sense probe. Scale bars, 100  $\mu$ m.

**Supplementary Figure S3. Explant culture with conditioned medium in E16.5 control mice.**

Immunostaining of amylase (red), insulin (blue), CK19 (green) and DAPI (white) in control mice pancreatic explant at 4 hours after (left panel) and 48 hours after (right panel). Pancreatic explant shows similar compositions at 4 hours and 48 hours. The percentage of pHH3 positive cells among insulin-expressing cells tended to decrease on cultured explant at 48 hours compared with in vivo pancreas at E16.5. Scale bars, 100  $\mu$ m.

Transcripts Cluster ID	Fold Change	Regulation	genesymbol	genedescription
10581355	48.523033	down	Ctrl	chymotrypsin-like
