Supplemental Material

A State-of-the-Science Review of Mercury Biomarkers in Human Populations Worldwide between 2000 and 2018

Niladri Basu, Milena Horvat, David C. Evers, Irina Zastenskaya, Pál Weihe, and Joanna Tempowski

Table of Contents

Table S1. Summary of national programs that conduct mercury human biomonitoring.

Table S2. Number of individuals sampled and mercury biomarker measurements taken in the national biomonitoring studies.

Table S3. Comparison of blood total mercury (Hg) concentrations ($\mu\text{g/L}$) in adults and children from nine countries, reported in national biomonitoring programs.

Table S4. Count of sub-populations, individuals, and mercury biomarker measurements from the cross-sectional studies, grouped by WHO region, population group by source of exposure, and type of location.

Table S5. Reference values for mercury biomarkers.

Table S6. Central and upper median hair mercury levels ($\mu\text{g/g}$) from the cross-sectional studies grouped by WHO region, population group (source of exposure), and type of location.

Table S7. Comparison of urinary total mercury (Hg) measurement ($\mu\text{g/L}$) in adults and children in five countries reported in national biomonitoring programs.

Table S8. Central and upper median urinary mercury levels ($\mu\text{g/L}$) from the cross-sectional studies, grouped by WHO region, population group (source of exposure), and type of location.
