## Supplemental Tables.

Full multivariable regression results for the four models described in the paper: total health care worker density (S1); physician density (S2); nurse density (S3); and disaggregated physician and nurse density (S4).

Full regression analyses, stratified by country-level income classification (low, lower-middle, upper-middle, high): total health care worker density (S5); physician density (S6); nurse density (S7); and disaggregated physician and nurse density (S8).

Full regression analyses, stratified by year of study (1990-1999 vs. 2000-2010): total health care worker density (S9); physician density (S10); nurse density (S11); and disaggregated physician and nurse density (S12).
