Table S3: Association between concurrent prescription of tizanidine and aCYP1A2 inhibitor and severe hypotension

	Tizanidine	Cyclobenzaprine	p-value
	(n=1,077)	(n=3,376)	
Windows with event (SBP<=70)	20	29	
Rate of Event (%)	1.86	0.86	0.011
Odds Ratio (95% CI)	2.18 (1.23, 3.88)	Reference	0.008
Adjusted Odds Ratio – adjusted	2.11 (1.16, 3.83)	Reference	0.015
for age, race, and sex			
Adjusted for logarithmically	1.97 (1.08, 3.59)	Reference	0.027
transformed PS*			

*PS included the following variables: age, use of ciprofloxacin vs fluvoxamine, race, sex, baseline systolic blood pressure, Charlson score, current use of ARBs, ACE inhibitors, betablockers, calcium channel blockers, diuretics, alpha-agonist agents, and other antihypertensive agents.
