

List of Supplemental Tables

Table S1

The table contains all genome-wide expression data (Human gene level RPKM values) presented in this study, which were generated by RNA-seq.

Table S2

The table contains all genome-wide expression data (Human transcript level RPKM values) presented in this study, which were generated by RNA-seq.

Table S3

The table is related to Figure 2B and contains the gene level expression values (RPKM) and additional information for the 3123 differentially expressed human genes.

Table S4

The table is related to Figure 2C and provides gene ontology information for the up- and down-regulated human genes.

Table S5

The table provides a list and additional information of the identified 11,469 FLAG-RTA ChIP-seq peaks on the human genome.

Table S6

The table is related to Figure 3A and contains the gene level expression values (RPKM) and additional information for the 163 core RIGs.
