

Table A2. Results from the linear mixed-effects model with retention blocks as time factors (baseline, mid-training retention [MTR] and short-term retention [STR]) and tracking error as dependent variable

	Estimate	SE	95% CI	<i>p</i>-value
Intercept	0.060	0.005	0.049, 0.067	< 0.001***
HEA	-0.019	0.007	-0.029, -0.003	0.009**
VEA	-0.004	0.007	-0.019, 0.005	0.598
MTR	-0.017	0.005	-0.029, -0.007	< 0.001***
STR	-0.019	0.005	-0.029, -0.009	< 0.001***
HEA × MTR	0.013	0.007	-0.001, 0.028	0.080
VEA × MTR	0.015	0.007	0.007, 0.034	0.028*
HEA × STR	0.015	0.007	0.001, 0.03	0.038*
VEA × STR	0.007	0.007	-0.003, 0.026	0.319

SE: standard error; CI: confidence interval using parametric bootstrapping. Reference level for group factor is Control and for time factor is Baseline. *** $p \leq 0.001$, ** $p \leq 0.01$, * $p \leq 0.05$, $p \leq 0.1$
