

Supplementary Figure 5

Supplementary Figure 5. Bland–Altman analysis for inter-observer agreement of the two readers.

Bland–Altman analysis of the difference between the measures taken by readers 1 and 2 of BL-FAF area **(A)** and SD-OCT thickness of ONL **(B)** DZ **(C)** and total retina **(D)** versus the mean of measurements. The mean bias is presented as a bold black line. Limits of agreement (LOA) are indicated by thin black lines and the respective 95% confidence intervals of the mean bias and LOA are marked with dashed lines.
