

Supporting Figure Legends

Figure S1. The IC₅₀ was detected in HCT116 and HCT15 cells. The concentrations were required to inhibit 50% of cell growth. The results showed that the concentration of ABT-263 and AXIT was almost 2 μ M and 1 μ M.

Drug \ Cell	IC₅₀(μM)	HCT15	HCT116
ABT263		2.017 \pm 0.097	2.024 \pm 0.328
AXIT		0.876 \pm 0.129	1.027 \pm 0.0.434
