

This file contains meme motif search results for Loki Castle Viruses of Mimivirus group, and for Loki Castle Virophages

The ‘upstream’ regions are from -250 to 30 nt related to the start codon; the regions shorter than 50 nt are filtered out

Meme search was set to 25 nt of motif width

Upstream region sequences and meme output files can be found at:
ftp://ftp.ncbi.nih.gov/pub/yutinn/Loki_Castle_NCLDV_2018/meme_motif_search

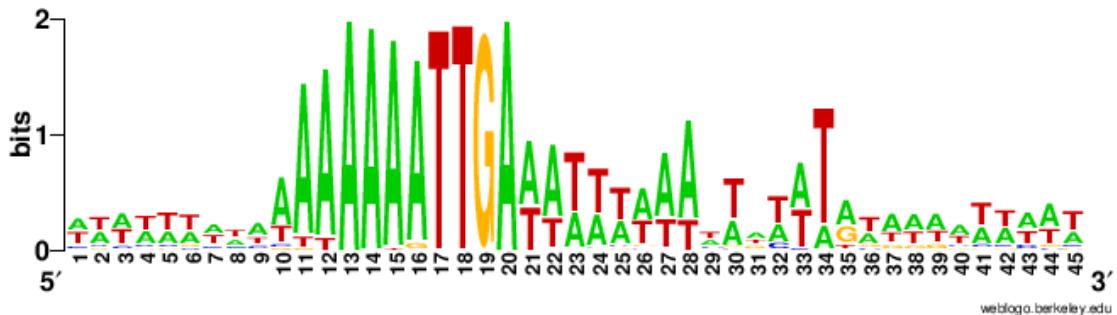

Conserved motifs AAA(T/A)TGA are marked with the ‘sun’ sign
Conserved AT-rich motifs are marked with the ‘moon’ sign

note: on all Logo images, the detected motif starts from position #11

LCMiAC01, LCMiAC02

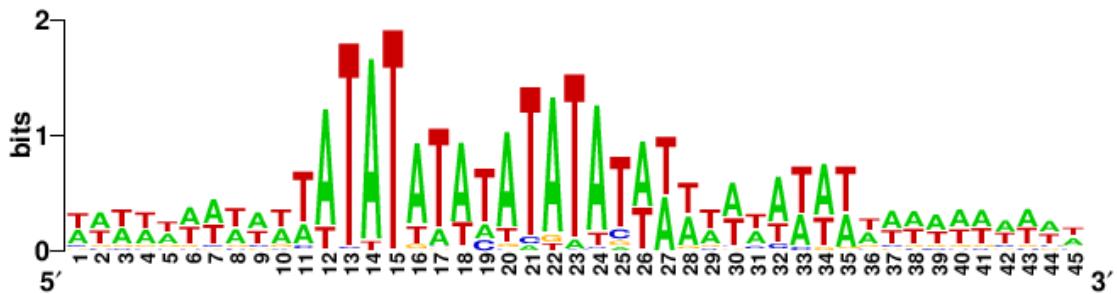

1130 fragments

Motif #3 (399 sites)

weblog.o.berkeley.edu

Motif #4 (425 sites)

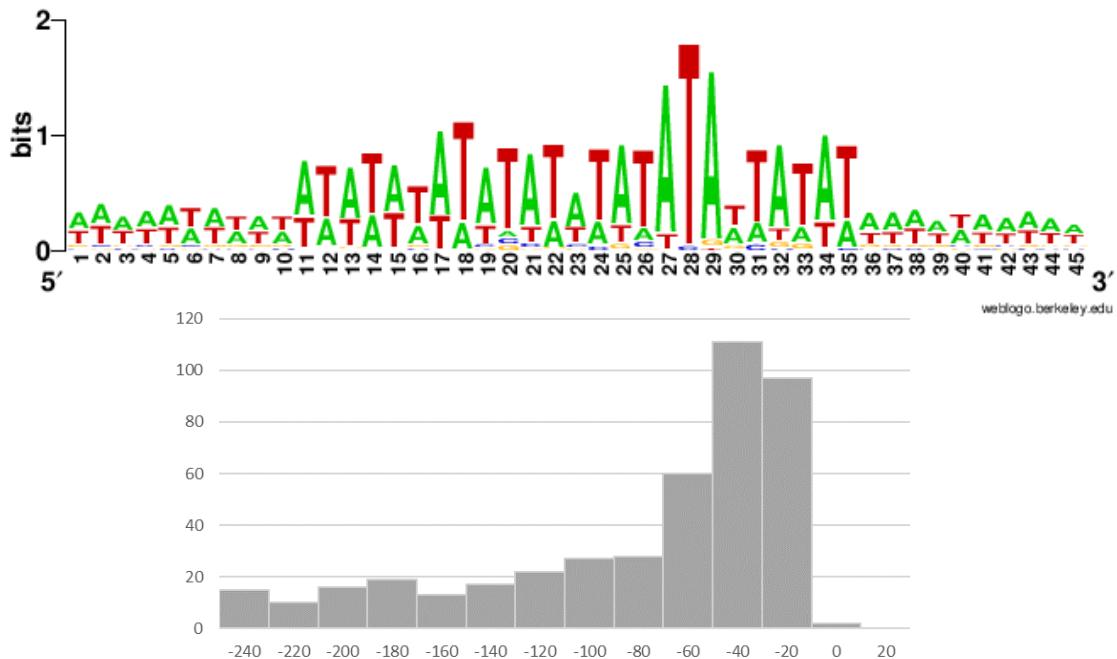

weblog.o.berkeley.edu

LCMiAC01

566 fragments

Motif #2 (437 sites)

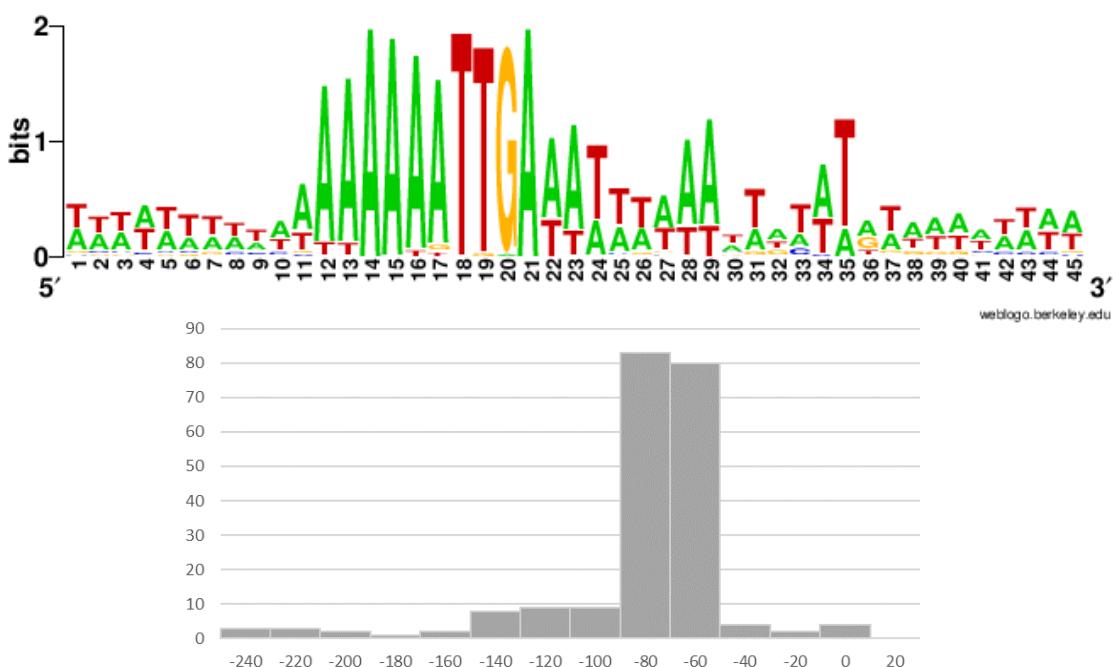

LCMiAC02

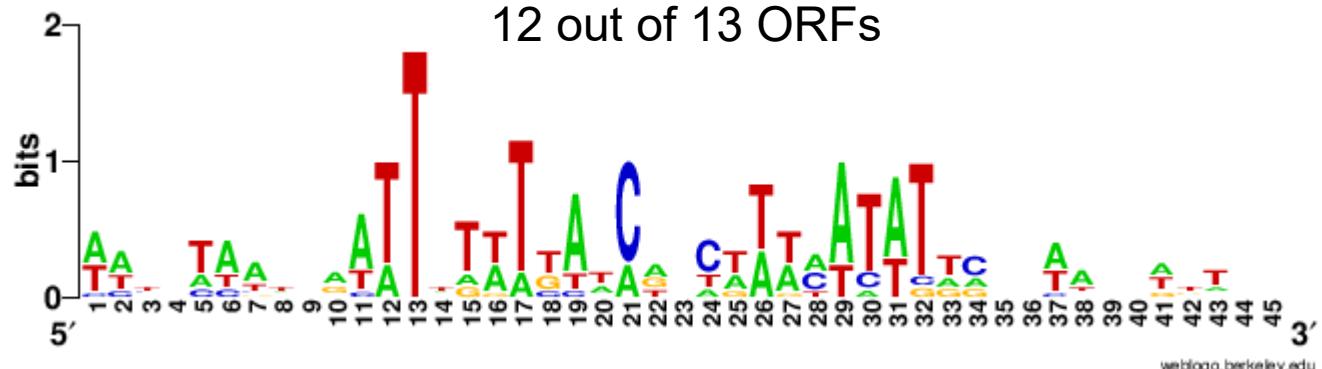

564 fragments

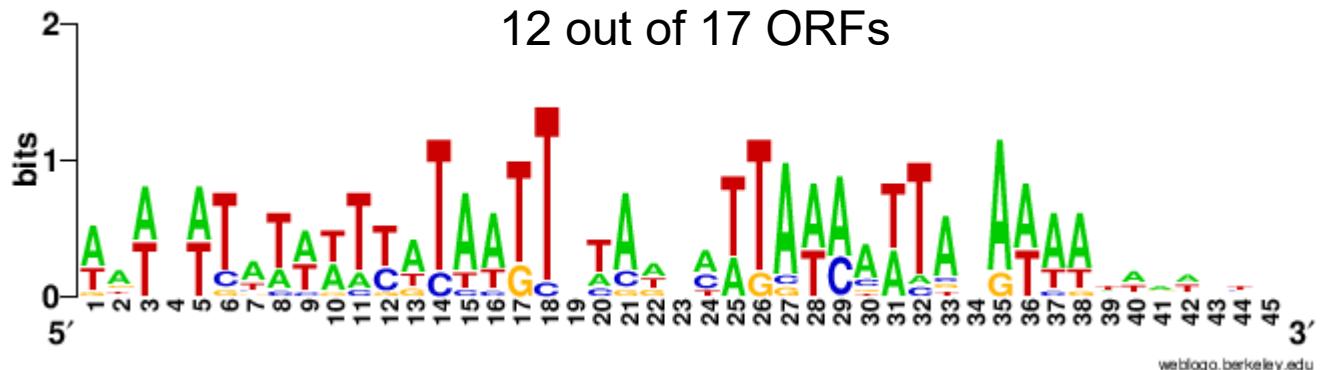

Motif #1 (223 sites)

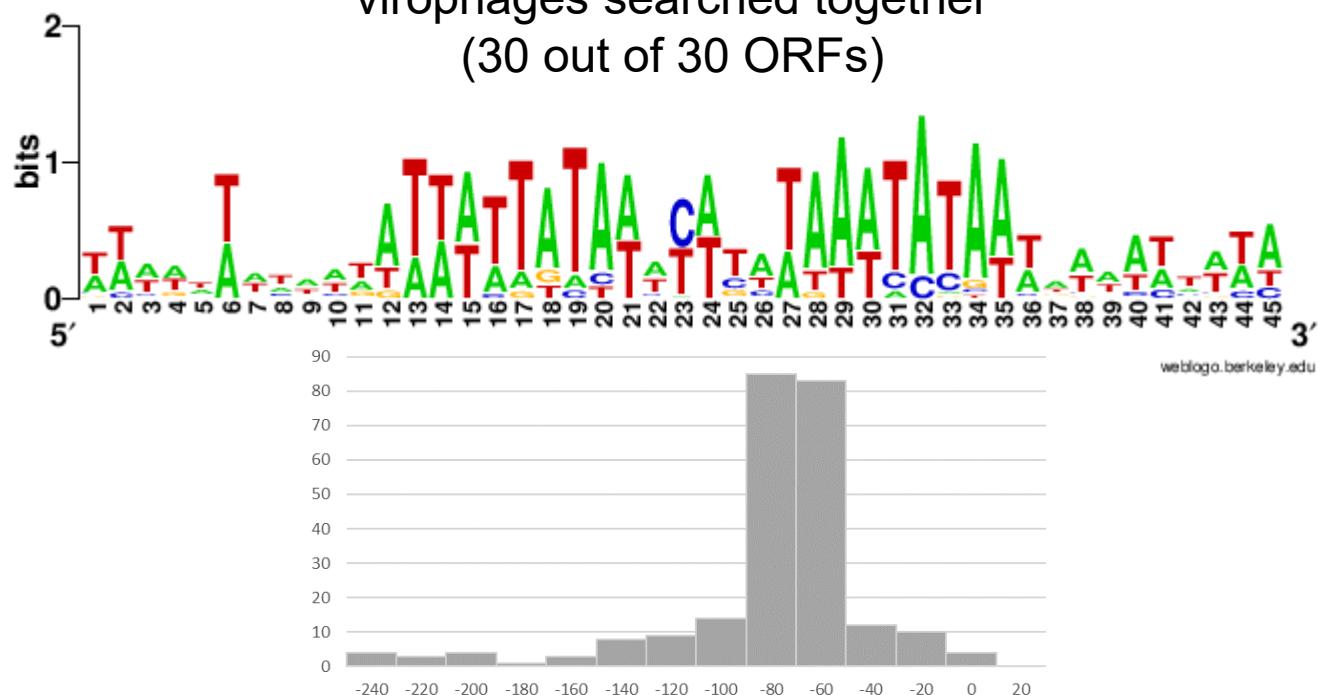

Viro 1368, motif 7
12 out of 13 ORFs

Viro 852, motif 2
12 out of 17 ORFs

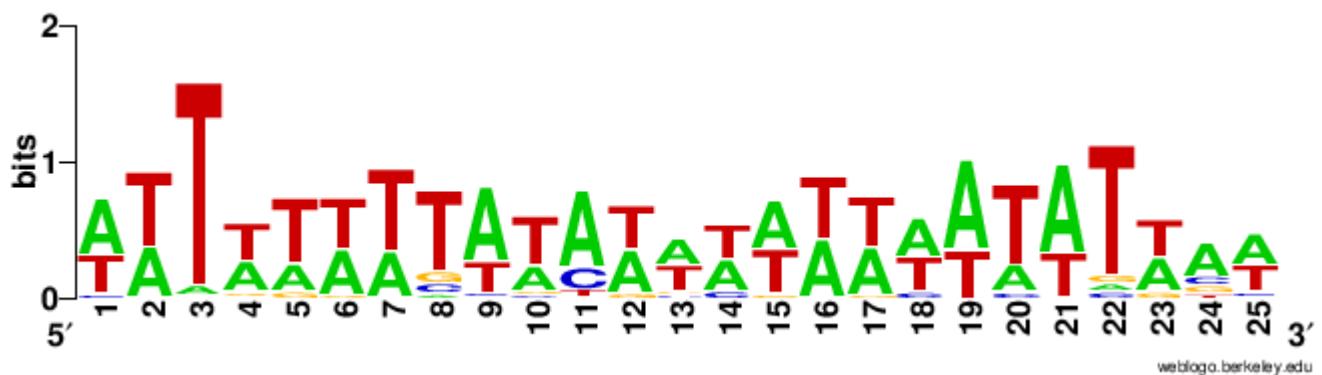

virophages searched together
(30 out of 30 ORFs)

Viro 1368 and viro 852 conserved motifs vs MiAC upstream regions (by FIMO)

Viro 1368

Viro 852
