## SUPPLEMENTAL FIGURE LEGEND.

**Supplemental Figure 1. Bivariate gating analysis scheme.** Bivariate plots were used to compare features of MMF+ and MMF- SLE patient PBMCs by mass cytometry. Density map correspond to proportional cell abundance for each population indicated above each plot. (A) Main cell populations were first gated off intact cells defined by iridium-intercalators. Intact singlets were defined using cell length, and live cells were gated on the absence of cisplatin staining. CD3 and CD19 were used to identify T cells and B cells. NKT cells were identified as CD3+CD56+. CD4+ and CD8+ T cells were gated off of CD3+CD56- cells. B Cells were gated on CD27, IgD, CD24 and CD38 to identify DN B Cells (CD27-IgD-), transitional B cells (CD27-IgD+CD38+CD24+), Naïve B cells(CD27-IgD+CD38±CD24-), Non-switched memory B cells(CD27+IgD+), Switched memory B cells(CD27+IgD-CD38-) and plasmablasts (CD27+IgD-CD38+). Myeloid cells were gated off CD3-CD19- cells to gate pDCs (HLA-DR+CD11c-CD123+), classical monocytes (HLA-DR+CD11c+CD14+CD16-), intermediate monocytes (HLA-DR+CD11c+CD14+CD16+), non-classical monocytes (HLA-DR+CD11c+CD14-CD16+), and dendritic cells (HLA-DR+CD11c+CD14-). (B) NK cell subsets were gated off CD3-CD19- and then CD56+ cells. (C) T cells were gated off CD4+ or CD8+ for memory(CD45RA-) and naïve/effector(CD45RA+) cells, Treg-type cells(CD25+CD127-), Tfh-type cells(CXCR5+PD-1+), Th1-type cells (CXCR3+), Th17-type cells(CCR6+CD161+), CD57+ T cells. TCR $\gamma$  $\delta$ + T cells were gated off CD3+CD56- cells.(D) Other myeloid cell subsets such as basophils (HLA-DR-CD11c-CD123+), conventional DCs(CD11b+ DCs), CXCR3+ DCs, and myeloid-derived suppressor cells (CD14+CD11b+CD33+HLA-DR-) were gated off CD3-CD19- gate.
