

Table S1. Within-subjects comparisons of movement times and contact duration during RI

temporal aspects		<i>M</i>	<i>N</i>	<i>SD</i>	<i>t</i>	<i>df</i>	<i>p</i>
Pair 1	T1 right hand	.944	23	.300	.588	22	.563
	T1 left hand	.909	23	.229			
Pair 2	T2 right contact	1.938	23	1.376	.222	22	.826
	T2 left contact	1.832	23	1.722			
Pair 3	T3 right hand	.983	23	.247	-.980	22	.338
	T3 left hand	1.326	23	1.668			

T1 = movement time towards face; T2 = sFST skin contact duration; T3 = movement time away from face; Paired-samples t-tests of movement times and contact durations for left- and right-handed sFST indicated no significant differences.
