

Table S2. Within-subjects comparisons of movement times and contact duration *during reproduction*

temporal aspects		<i>M</i>	<i>N</i>	<i>SD</i>	<i>t</i>	<i>df</i>	<i>p</i>
T1	right hand	.6044	6	.18612	-.800	5	.460
	left hand	.7023	6	.33855			
T2	right contact	.8542	6	.38802	-1.555	5	.181
	left contact	1.2384	6	.62103			
T3	right hand	.6059	6	.11644	-.987	5	.369
	left hand	.8180	6	.46650			

T1 = movement time towards face; T2 = sFST skin contact duration; T3 = movement time away from face; Subjects who performed both left- and right-handed sFST during reproduction (n = 6) did not differ in the temporal aspects of their left- and right-handed sFST (paired-samples t-tests).
