metabolic process
developmental process
cell killing
regulation of molecular function
rhythmic process
biological regulation
regulation of biological process
cellular process
localization
positive regulation of biological process
positive regulation of molecular function
cellular component organization or biogenesis
growth
response to stimulus
reproductive process
negative regulation of biological process
multicellular organismal process
immune system process
multi-organism process
single-organism process
reproduction
negative regulation of molecular function
biological adhesion
locomotion
establishment of localization
signaling
organelle
nucleoid
cell junction
symplast
extracellular matrix
macromolecular matrix
extracellular matrix part
membrane
membrane-enclosed lumen
cell part
cell
synapse
synapse part
organelle part
extracellular region part
membrane part
extracellular region
receptor activity
molecular transducer activity
catalytic activity
binding
nuleic acid binding transcription factor activity
enzyme regulator activity
translation regulator activity
protein binding transcription factor activity
nutrient reservoir activity
guanyl-nucleotide exchange factor activity
transporter activity
channel regulator activity
receptor regulator activity
metallochaperone activity
protein tag
structural molecule activity
electron carrier activity
antioxidant activity
biological proces
cellular component
molecular function
