

## Supplemental Material

**Online Figure I.** Flowchart of participants with diabetes included in the analysis

**Online Figure II.** Associations between total and tree nut consumption and all-cause mortality\*

\* Hazard ratios were adjusted for age (continuous), diabetes duration (years), sex (men or women), Caucasian (yes/no), BMI at diabetes diagnosis (<23.0, 23.0-24.9, 25.0-29.9, 30.0-34.9,  $\geq 35.0$  kg/m<sup>2</sup>), physical activity (<3.0, 3.0-8.9, 9.0-17.9, 18.0-26.9,  $\geq 27.0$  MET-hours/week), smoking status (never, past, current 1-14 cigarettes/day, current  $\geq 15$  cigarettes/day), alcohol consumption (0, 0.1-4.9, 5.0-14.9,  $\geq 15.0$  g/day), family history of MI or cancer (yes/no), current aspirin use (yes/no), presence of hypertension (yes/no), use of lipid-lowering medication (yes/no), diabetes medication use (insulin, oral medication, or others), and intake of total energy, red or processed meat, fruits, and vegetables (all in quartiles). Both *P* for non-linearity were <0.001.

**Online Figure III.** Hazard ratios (95% CIs) of CVD incidence and CVD mortality according to total nut consumption after diabetes diagnosis in subgroups\*

\* Multivariable analyses were adjusted for age (continuous), diabetes duration (years), sex (men or women), Caucasian (yes/no), BMI at diabetes diagnosis (<23.0, 23.0-24.9, 25.0-29.9, 30.0-34.9,  $\geq 35.0$  kg/m<sup>2</sup>), physical activity (<3.0, 3.0-8.9, 9.0-17.9, 18.0-26.9,  $\geq 27.0$  MET-hours/week), smoking status (never, past, current 1-14 cigarettes/day, current  $\geq 15$  cigarettes/day), alcohol consumption (0, 0.1-4.9, 5.0-14.9,  $\geq 15.0$  g/day), current aspirin use (yes/no), family history of MI or cancer (yes/no), presence of hypertension (yes/no), use of lipid-lowering medication (yes/no), diabetes medication use (insulin, oral medication, or others), and intake of total energy, red or processed meat, fruits, and vegetables (all in quartiles). Stratifying variables were not included in the model when analyses were stratified by these variables individually. AHEI: Alternate Healthy Eating Index.

**Online Table I.** Partial Spearman correlation coefficients among types of nut consumption before and after diabetes diagnosis\*

	Nut consumption after diabetes diagnosis		
	Total nuts	Tree nuts	Peanuts
After diabetes diagnosis			
Total nuts	1.00	----	----
Tree nuts	0.80**	1.00	----
Peanuts	0.75**	0.42**	1.00
Before diabetes diagnosis			
Total nuts	0.39**	0.33**	0.34**
Tree nuts	0.30**	0.39**	0.22**
Peanuts	0.33**	0.22**	0.43**

\* Adjusted for age, diabetes duration, sex, ethnicity, BMI at diabetes diagnosis, physical activity, smoking status, alcohol consumption, family history of MI or cancer, current aspirin use, total energy intake, and AHEI excluding nuts. \*\*  $P < 0.001$ .

**Online Table II.** Hazard ratios (95% CIs) of CVD incidence and mortality according to total nut consumption after diabetes diagnosis using the average of last two FFQs\*
