APPENDIX S4. Timing of different reproductive stages and leafing stages, as predicted by best fitting models at the mean elevation (545 m), year (1946), and January, February, or March temperature (8.35°C) in our data set. Small letters above each circle represent the Tukey's group that each stage falls into. For example, reproductive stages 1 and 2 both fall into group "a," whereas reproductive stages 2 and 3 fall into group "b," meaning that stages 1 and 2, and 2 and 3 are not statistically different from each other, but reproductive stages 1 and 3 are.
