

Supplemental Figure 2 Effects of absence of p21, p27, or p18 on iPSC generation by transduction with three factors (Oct4, Sox2 and Klf4).

- a) SSEA1 positive colonies derived from different genotype MEFs relative to that from WT MEFs at reprogramming day 14 by transduction with three factors (Oct4, Sox2 and Klf4).
- b) SSEA1 positive colonies in *p27*^{+/-}, *p27*^{-/-}, *p18*^{+/-}, and *p18*^{-/-} iPSCs relative to that of WT iPSCs at day 14 after transduction with three factors.

Data are representative of two or three independent experiments. Error bars, \pm SD. *, $p < 0.05$; **, $p < 0.01$, by two-tailed *t* test.
