

**Supplementary Material to “The complete chloroplast genome sequences of three *Spondias* species reveal close relationship among the species”**

**Figure S3** - Chloroplast genome map of *S. mombin*. Annotated genes are colored according to the functional categories as described in the legend. Genes on the inside are transcribed in a clockwise direction and on the outside are transcribed in a counterclockwise direction. LSC: large single copy region; SSC: small single copy region; IRA; IRB: inverted repeat. The inside gray circle represents the C+G content.
