

Supplementary Figure 4

Supplementary Figure 4. TNF α and IFN γ levels from CD4+ and CD8+ sorted SmarT-cells
(a-b) TNF α and IFN γ cytokine levels from sorted CD4+ and CD8+ SmarT-cells cultured in tumor milieu conditions for 10 days, and detected in supernatant collected 24 hours post-stimulation with PSCA, TGF β and IL4. Significance was determined using a student's two-tailed t-test (ns = not significant).
