

## Supplemental Material

### Time trends and developmental patterns of polybrominated diphenyl ether concentrations over a 15-year period between 1998 and 2013

Whitney J. Cowell, Andreas Sjödin, Richard Jones, Ya Wang, Shuang Wang, Julie B. Herbstman

#### Table of Contents

**Supplemental Material, Table S1.** Within congener correlations of PBDE concentrations from birth through age 9 years.

**Supplemental Material, Table S2.** Between congener correlations of PBDE concentrations from birth through age 9 years.

**Supplemental Material, Table S3.** Criteria for evaluating trajectory fit.

**Supplemental Material, Table S4.** Age-specific comparisons of infant and child PBDE concentrations across several U.S. based studies.

**Supplemental Material, Figure S5.** Age-specific comparisons of infant and child PBDE concentrations across several U.S. based studies.

**Table S1.** Within congener Spearman correlation coefficients (p-values) between plasma PBDE concentrations measured between birth and age 9 years.

|                | Birth        | Age 2        | Age 3        | Age 5        | Age 7        | Age 9 |

<sup>a</sup>Median, <sup>b</sup>Arithmetic mean, <sup>c</sup>Umbilical cord blood, <sup>d</sup>Maternal blood during pregnancy

**Figure S5.** Age-specific comparison of PBDE concentrations across several U.S-based studies.

White points outlined in color indicate concentrations measured in maternal (versus cord) blood collected during the prenatal period. The size of each point indicates relative sample size. CHAMACOS: The Center for the Health Assessment of Mothers and Children of Salinas Study (Eskenazi 2013); HOME: Health Outcomes and Measures of the Environment Study (Vuong 2017); CCCEH: Columbia Center for Children's Environmental Health Mothers and Newborns Cohort. Details and references for cross-sectional studies are provided in the Supplemental Material, Table S4.
