Supplementary Table S1.

Confusion matrix of the classification of healthy subjects, patients with epilepsy, and patients with spinal cord injury.

		Predicted		
		HS	EP	SCI
Original	HS	53	10	4
	EP	9	123	8
	SCI	11	3	12

HS: healthy subjects; EP: patients with epilepsy; SCI: patients with spinal cord injury

Supplementary Table S2.

Confusion matrix of the classification of healthy subjects and patients with epilepsy.

		Predicted	
		HS	EP
Original	HS	58	9
	EP	13	127

HS: healthy subjects; EP: patients with epilepsy

Supplementary Table S3.

Confusion matrix of the classification of healthy subjects and patients with spinal cord injury.

		Predicted	
		HS	SCI
Original	HS	55	12
	SCI	16	10

HS: healthy subjects; SCI: patients with spinal cord injury

Supplementary Table S4.

Confusion matrix of the classification of patients with epilepsy and patients with spinal cord injury.

		Predicted	
		EP	SCI
Original	EP	137	3
	SCI	10	16

EP: Patients with epilepsy; SCI: patients with spinal cord injury

Supplementary Table S5.

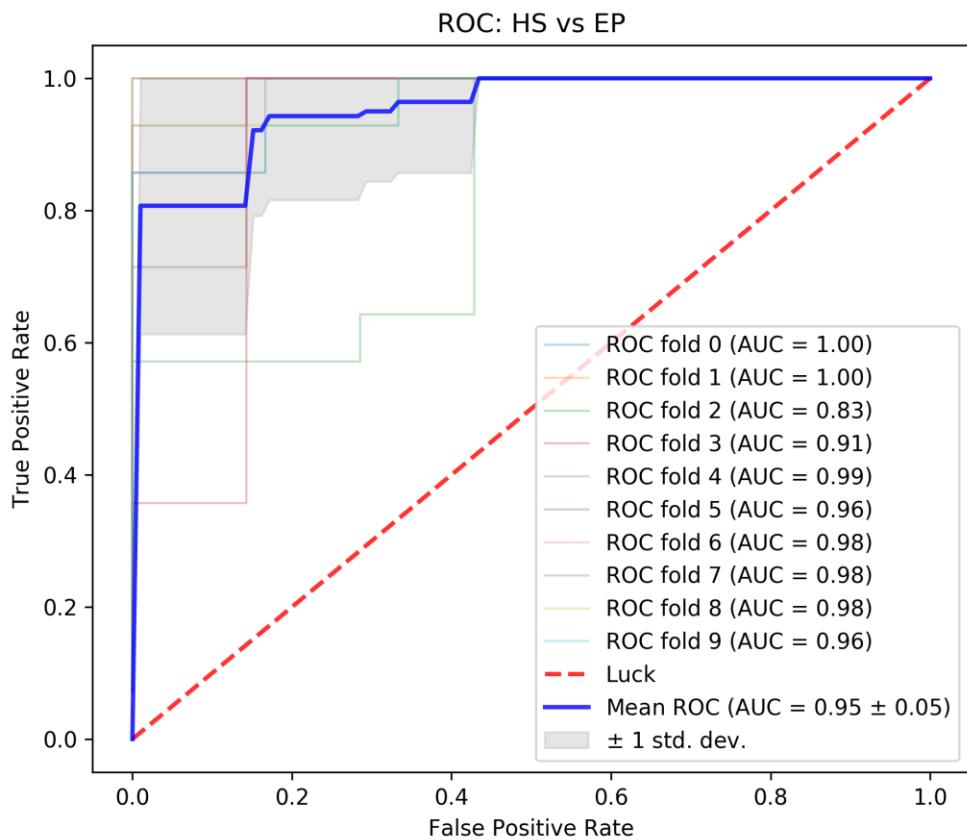

Confusion matrix of the classification of healthy subjects and patients with epilepsy by three-fold nested cross-validation.

		Predicted	
		HS	EP
Original	HS	50	17
	EP	13	127

HS: healthy subjects; EP: patients with epilepsy

Supplementary Figure S6.

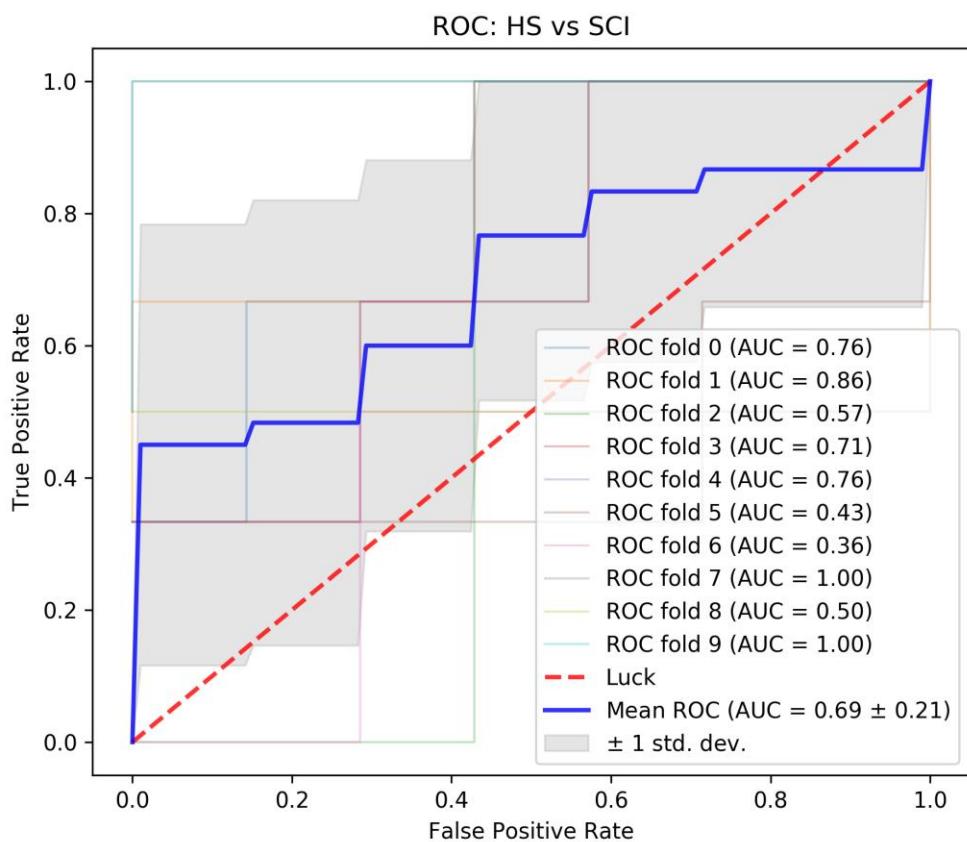

ROC curve of the classification of healthy subjects and patients with epilepsy; in this figure, positive means having epilepsy

AUC: area under the curve; HS: healthy subjects; EP: patients with epilepsy

Supplementary Figure S7.

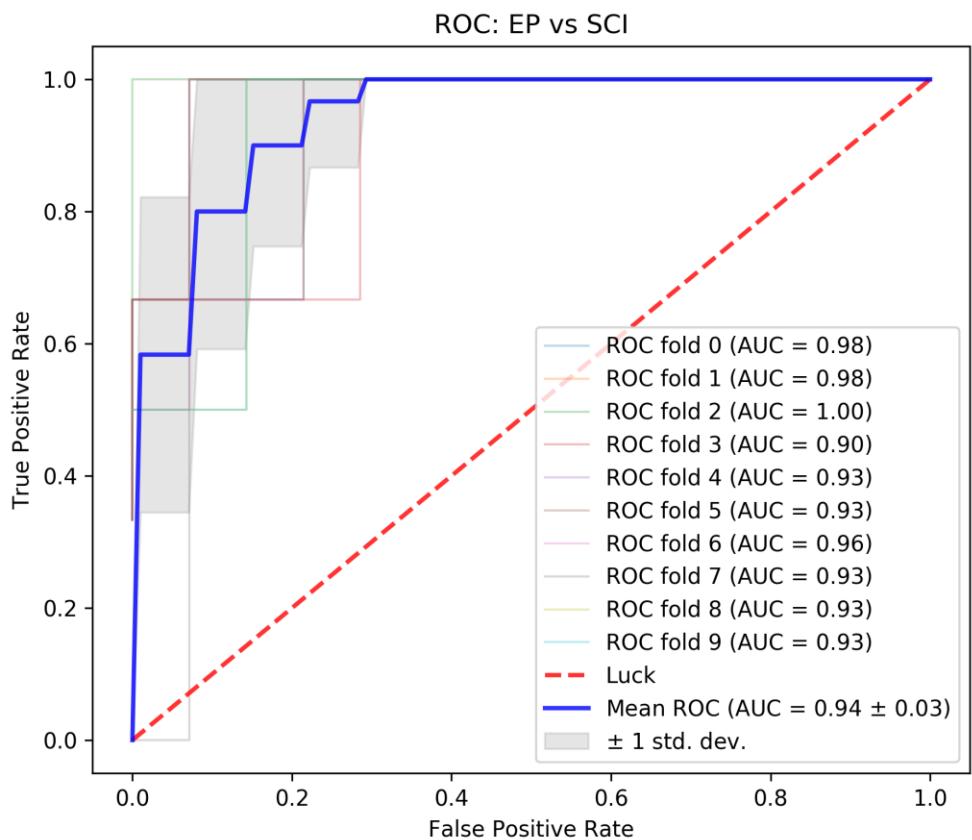

ROC curve of the classification of healthy subjects and patients with spinal cord injury; in this figure, positive means having spinal cord injury.

AUC: area under the curve; HS: healthy subjects; SCI: patients with spinal cord injury

Supplementary Figure S8.

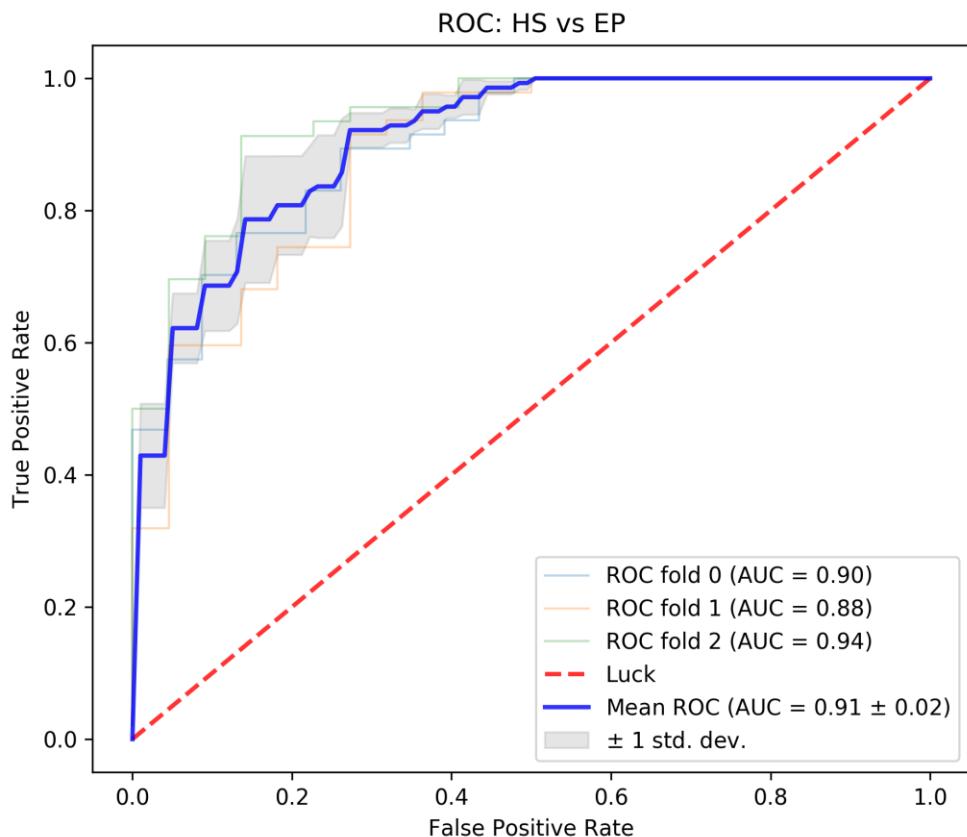

ROC curve of the classification of patients with epilepsy and patients with spinal cord injury; in this figure, positive means having spinal cord injury.

AUC: area under the curve; EP: patients with epilepsy; SCI: patients with spinal cord injury

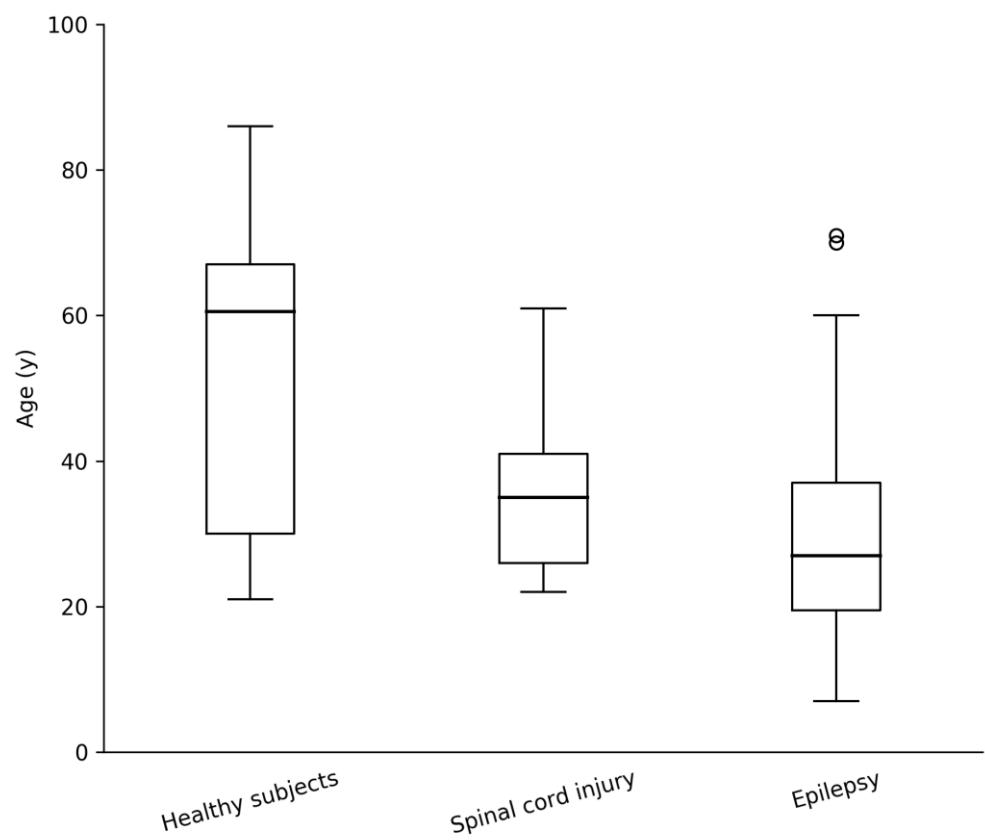

Supplementary Figure S9.

ROC curve of the classification of patients with epilepsy and healthy subjects with three-fold nested cross-validation; in this figure, positive means having epilepsy.

AUC: area under the curve; EP: patients with epilepsy; HS: healthy subjects

Supplementary Figure S10. Box and whisker plots of age distribution of healthy subjects, patients with spinal cord injury, and patients with epilepsy. The box extends from the lower to upper quartile values of the data, with a line at the median. The whiskers extend from the box to show the range of the data. Outliers are represented as circles.

Supplementary Table S11. Records information of data used in the study. Subject ID numbers subjects individually. The high-pass and low-pass filter columns show the cut-off frequencies of the high- and low-pass filters, respectively, and the band elimination filter column shows the frequency of the band elimination filter.

Subject ID	Diagnosis	Age (y)	Gender	Sampling Rate (Hz)	Acquisition Time (s)	High pass filter (Hz)	Low pass filter (Hz)	Elimination filter (Hz)	Subtypes of epilepsy
1	Healthy subject	67	Male	2k	300	0.1	500	N/A	
2	Healthy subject	62	Female	2k	300	0.1	500	N/A
