

SUPPLEMENTARY FIG. S4. Levels of CM CD4⁺ T cells in PBMCs. **(A)** The frequencies of CM (CD95⁺CD28⁺) CD4⁺ T cells in the PBMCs were measured by flow cytometry **(B)** Correlations between log₁₀-fold change in Th17/Treg ratios during acute infection as compared to preinfection levels (6 wpi/-4 wpi) versus CM CD4⁺ T cell frequencies in PBMC after 22 weeks on cART. cART, combination antiretroviral therapy. CM, central memory.
