

SUPPLEMENTARY FIG. S3. MHCII is expressed highly on F4/80⁺ macrophages and CD11c⁺ dendritic cells. There is a higher level of MHCII expression on F4/80⁺ macrophages compared to the canonical antigen-presenting CD11c⁺ dendritic cells. Saline = *white bars*; cardiac ECM (C-ECM) = *grey bars*; bone ECM (B-ECM) = *black bars*. Data are mean \pm SEM. **ANOVA $p < 0.01$. ANOVA, analysis of variance; ECM, extracellular matrix.
