

Figure S14: Screen capture of exon skipping (indicated by grey lines) in the *POLR1B* gene (exon 14) caused by the 3:g.43952776T>G splice region mutation. Figure shows three Ensembl-predicted *POLR1B* transcripts on the reverse strand and the alignment track of four carrier animals (928519, 924455, 781828, 711604).
