Supplemental Material

Supplemental Table 1: Association of number of past-year adverse health outcomes with indoor cannabis smoke exposure, in three ordinal logistic regression

models (sensitivity analyses; n=190)

		Model 1			Model 2			Model 3		
Variable	OR	(95% CI)	p-value	aOR	(95% CI)	p-value	aOR	(95% CI)	p-value	
Indoor Cannabis Smoke			0.12			0.10			0.08	
None	1.00	(reference)		1.00	(reference)		1.00	(reference)		
Any	1.75	(0.86-3.54)		1.84	(0.89-3.81)		1.95	(0.92-4.15)		

The three-level health outcome variable was used as the dependent variable in all 3 models.

Specifications of independent variables in the 3 models were as follows:

Model 1: Indoor cannabis smoking

Model 2: Model 1, and age of child, and education level of parent (or guardian)

Model 3: Model 2, and indoor cigarette smoking

OR = Odds ratio

aOR = Adjusted odds ratio

CI = Confidence interval
