
Azoreductase activity of dye-decolorizing bacteria isolated from the human gut microbiota

Sara A. Zahran, Marwa Ali-Tammam, Abdelgawad M. Hashem, Ramy K. Aziz, Amal E. Ali

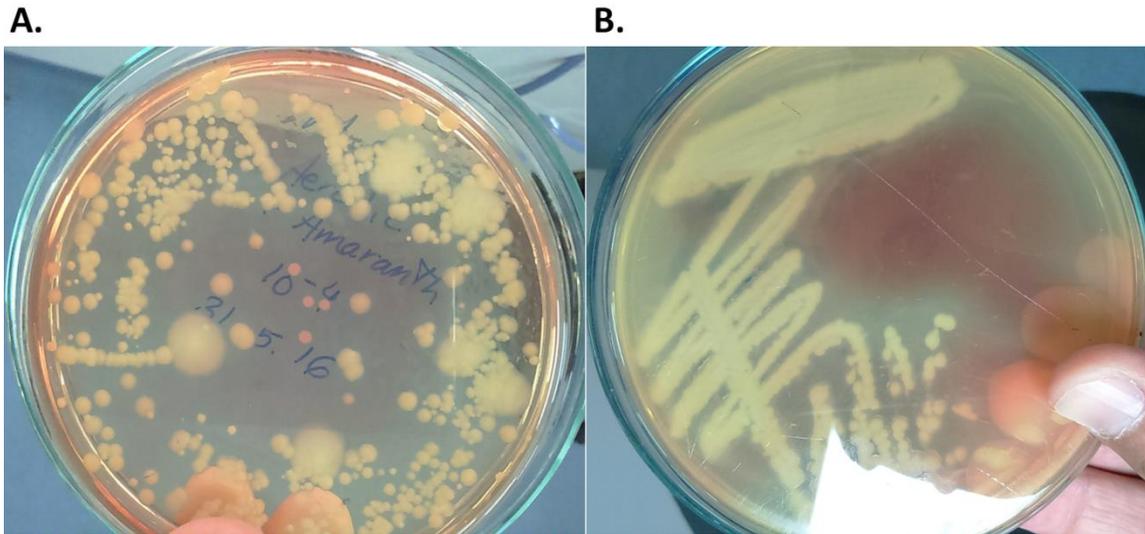

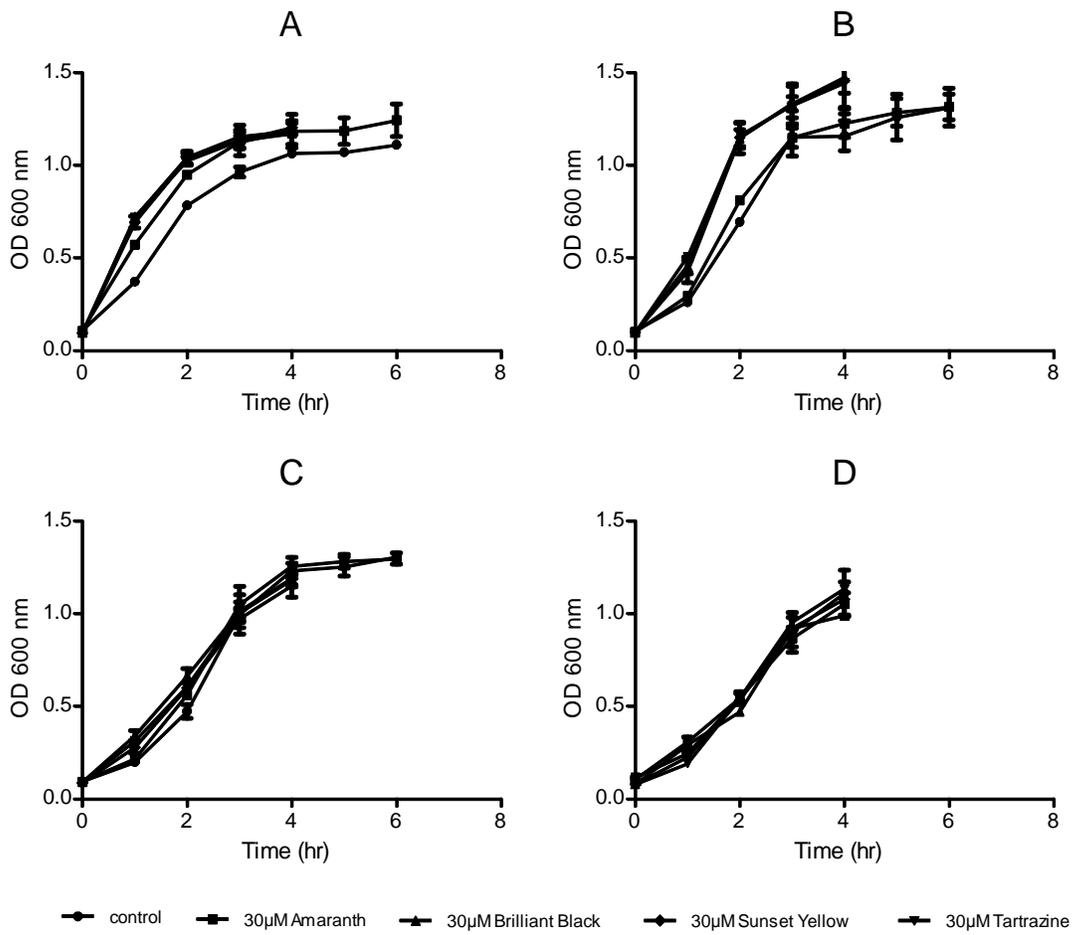

Figure-S1: Screening for azodye-reducing bacteria on BHIS agar supplemented with 20 μ M Amaranth. (A) Preliminary screening for azoreductase-producing bacteria from stool samples under aerobic conditions. (B) Single-colony isolation of colonies with promising activity in preliminary screens. Both cultures are on BHIS agar plates containing amaranth (20 μ M) and grown aerobically.

The bars represent the means of three experiments (+/- SD)

Figure-S2: Effect of azodyes on bacterial growth. Effect of used azodyes at a concentration of 30μM on the growth rates of the representative isolates: (A) AZO-Ec, (B) AZO-Ef, (C) AZO-Ev and (D) AZO-Bc. Readings represent the means of three experiments, and error bars represent the standard deviation.

Supplementary Table 1: Coefficient of determination (r^2) of azoreductase decolorization kinetics of the four selected isolates against different concentrations of different azodyes.

Isolate	Substrate	Substrate Concentration (μM)	Zero-order r^2	First-order r^2	Isolate	Substrate	Substrate Concentration (μM)	Zero-order r^2	First-order r^2		
AZO-Ev	Amaranth	10	0.997	0.929	AZO-Ef	Amaranth	10	0.981	0.947
