Supplementary Figure S1. Phylogeny of the viperines (black part of the tree) calibrated using 197 fossils of 28 species and the FBD model. The tree is a maximum clade credibility tree with mean node heights. Fossil tips have been removed from the tree because their phylogenetic placement was entirely a result of the prior. Posterior probability values are in italics and bold, mean node age estimates are underscored and their 95% HPD intervals are in brackets.

Supplementary Table S1. Sequences used for the phylogenetic analyses. Outgroup species marked with an asterisk in the ‘Sample’ field were used as the outgroup in the FBD analysis.

Supplementary Table S3. A list of viper fossils that were used for calibrating divergence times under the FBD model, their phylogenetic position, minimum and maximum estimated stratigraphic age, and locality details. The 'Notes' field contains details regarding the morphology or phylogenetic affinity of some of the specimens as described in the reference cited.

Fossil	Phylogenetic affinity	Min age	Max age	Country	Locality	Lat	Long	Notes	Reference
Bitis arietans	Bitis arietans	2.5	2.5	Morocco	Ahl al Oughlam (near Casablanca)	33.5931	-7.6164		Geraads 2006
Bitis cf. olduvaiensis	sister to Bitis arietans	2.66	3.85	Tanzania	Laetoli	-2.9962	35.3524		Rage 1973
Bitis olduvaiensis	sister to Bitis arietans	1.7	1.845	Tanzania	Olduvai Rift Valley	-2.983	35.35	Fossil assignment unclear, can be either B. olduvaiensis or B. arietans	Rage 1973
Bitis sp.	Bitis	17	17.5	Namibia	Arrisdriфт	-28.55	16.5	The earliest fossil record of the genus Bitis	Rage 2003
Daboia mauritanica	Daboia mauritanica	0.005	0.005	Morocco	El Harhoura 2 (Temara)	33.9522	-6.9259		Böhme and Ilg 2003
