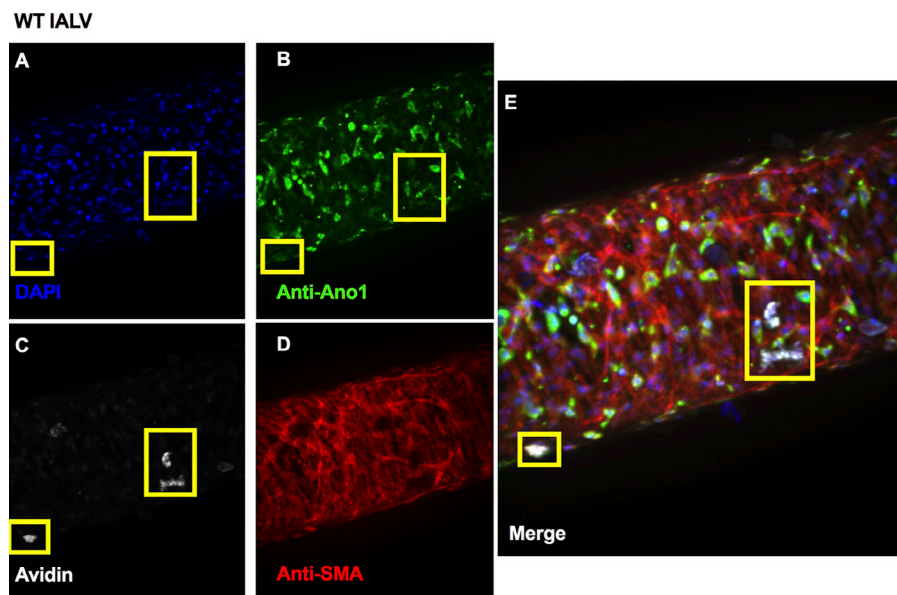

Figure S1. **Mast cells are a minor population of Ano1<sup>+</sup> cells in the IALV adventitia.** Representative immunofluorescence maximal projection of an IALV stained for 4',6-diamidino-2-phenylindole (blue; A), Ano1 (green; B), SMA to label LMCs (red; C), and avidin (white; D) to label mast cells and the corresponding merged image (E). Images were taken at 20 $\times$  objective magnification. Yellow boxes denote overlap in Ano1 and avidin signal.
