

**Suppl. Fig. 1.** Cytologic images of local tumor recurrence and computed tomography (CT) image at 8 weeks after surgery. (A, B) Mesenchymal origin cells with moderate cellularity show malignant features including anisokaryosis, prominent nucleoli, basophilic cytoplasm, coarse chromatin, and increased volume of cytoplasm. (C) A transverse image of the lung revealing multiple nodules (yellow arrows) on CT. Magnification: (A) 400× and (B) 1,000×.
