

SUPPLEMENTAL MATERIAL

Supplemental Figure 1. Average annual concentration levels for PM_{2.5} and NO₂ over time (1994-2010) by NIH-AARP study state

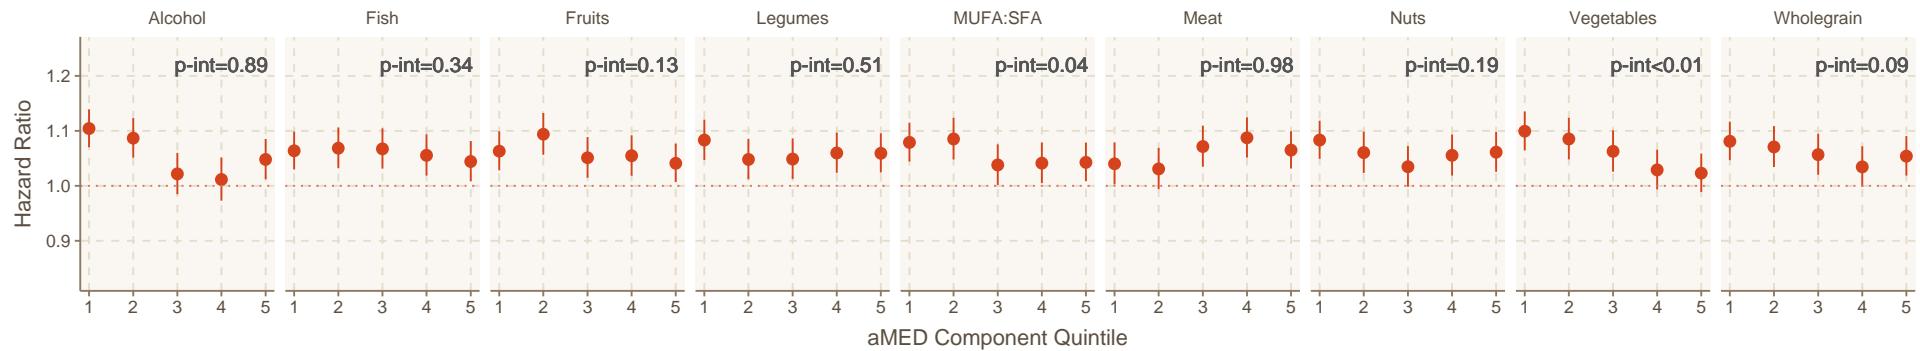

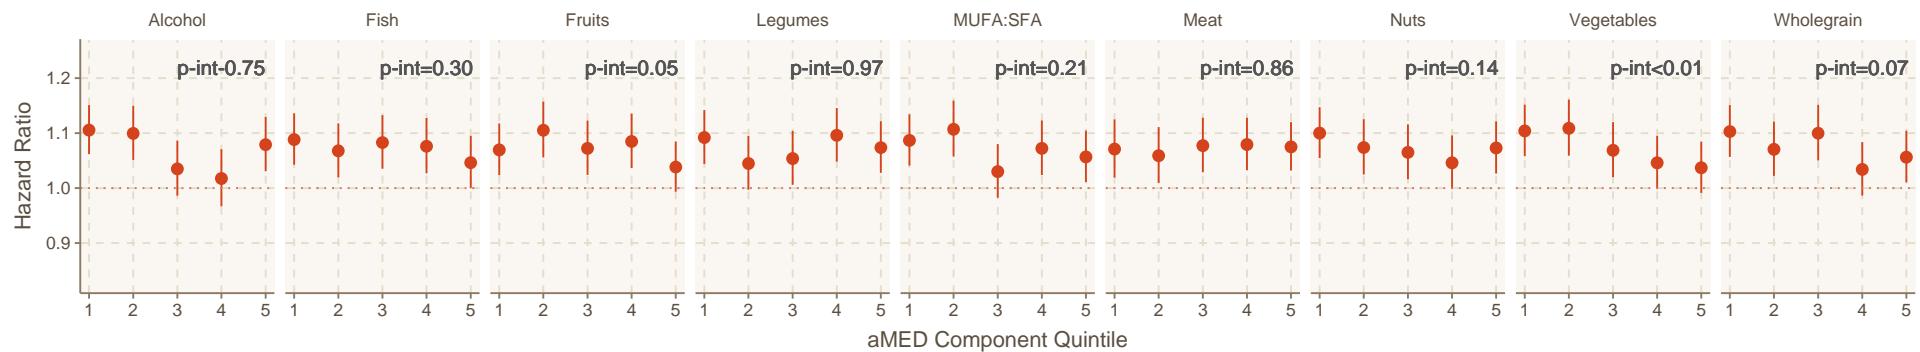

Supplemental Figure 2. HR and 95% CI associated with air pollutants by quintiles of alternative Mediterranean Diet Index (aMED) score components

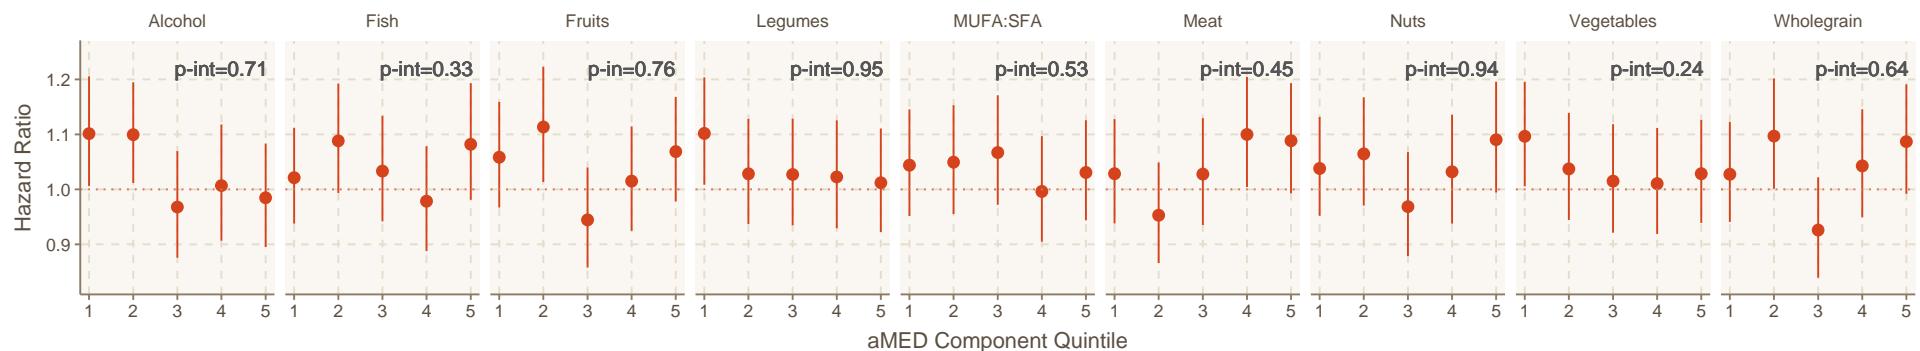

NO_2 -CVD

NO_2 -IHD

NO_2 -CER

Adjusted for sex and location as strata; and age (time-varying), race, BMI, education, smoking, marriage, and remaining dietary components at individual-level; and median income and % with high school education at census-tract level.

CVD indicates cardiovascular disease; IHD, ischemic heart disease; CER, cerebrovascular disease; and CAR, cardiac arrests

Supplemental Table 1: Results for the penalized ridge regression model, adjusting for both PM_{2.5} and NO₂ within the same model

Cause of Death	PM _{2.5}	NO ₂
	HR (95% CI)*	HR (95% CI)*
Cardiovascular Disease	1.05 (1.01-1.09)	1.03 (1.01-1.05)
Ischemic Heart Disease	1.06 (1.00-1.11)	1.04 (1.05-1.06)
Cerebrovascular Disease	1.08 (0.98-1.20)	1.01 (0.96-1.05)

*Adjusted for sex and location as strata; and age (time-varying), race, BMI, education, smoking, marriage, and alternative Mediterranean Diet Index (aMED) at individual-level; and median income and % with high school education at census-tract level.

Supplemental Table 2. Cause-specific HR and 95% CI (per $\mu\text{g}/\text{m}^3$ for $\text{PM}_{2.5}$; per 10 ppb for NO_2) associated with air pollutants by quintiles of alternative Mediterranean Diet Index (aMED) scores

				$\text{PM}_{2.5}$			NO_2	
Cause of Death	aMED Quintile	Deaths (n)	HR*	95% CI	p-int	HR*	95% CI	p-int
