

TABLE S1 – Infant mice exhibited more vascular hypo-responsiveness.

Groups	pD₂ values 6 h
Infant Sham	5.84 ± 0.03
Infant Sepsis	5.17 ± 0.33 ^{#,*}
Adult Sham	6.85 ± 0.08
Adult Sepsis	6.2 ± 0.14 ^{&}

pD₂ of concentration-response curve to phenylephrine (10-10-10-5 mol/L) 6 h after sepsis. Data are the mean ± SEM, n=5-6, representative of two experiments, #p<0.05 Infant septic vs. Infant Sham; &p<0.05 Adult Septic vs. Adult Sham; *p<0.05 Infant Septic vs. Adult Septic (% of maximum response, one way-ANOVA, Bonferroni's).

* pD₂ = -log (EC₅₀), EC₅₀: Half maximal effective concentration.
