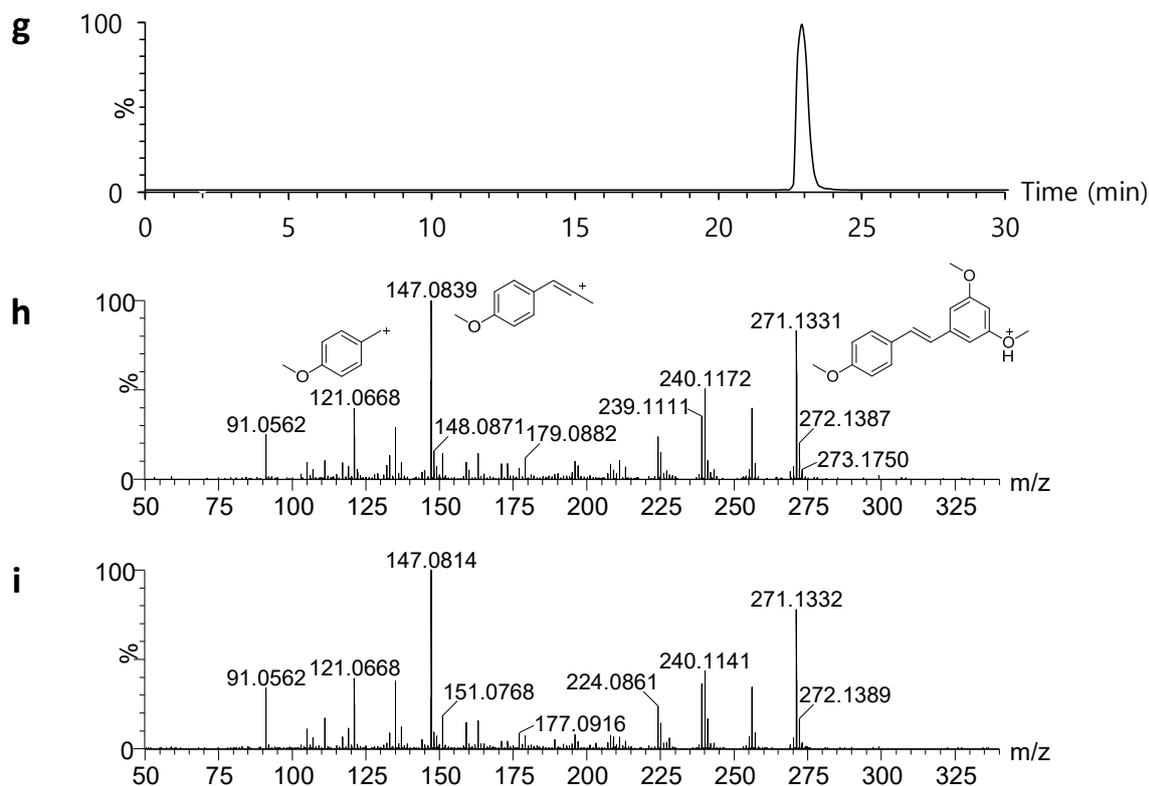

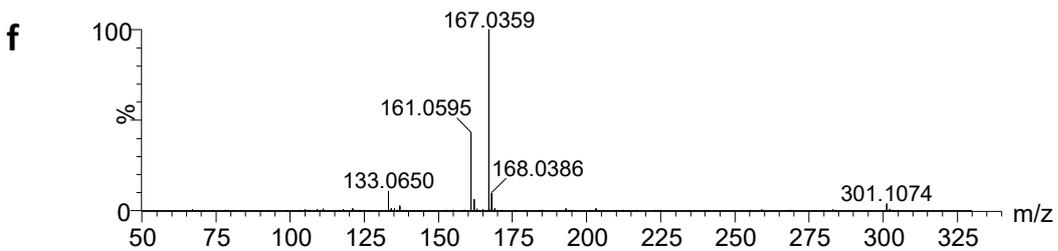

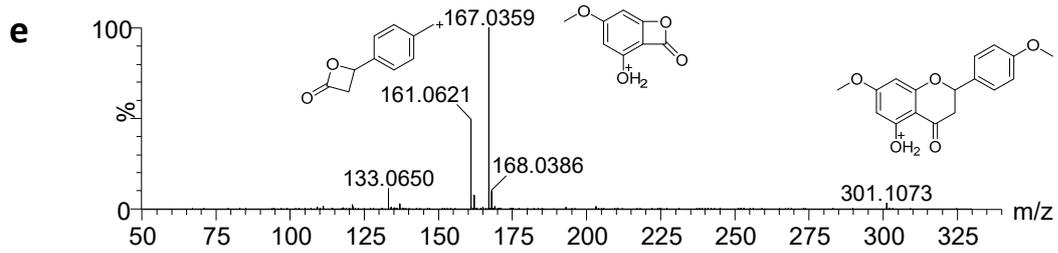

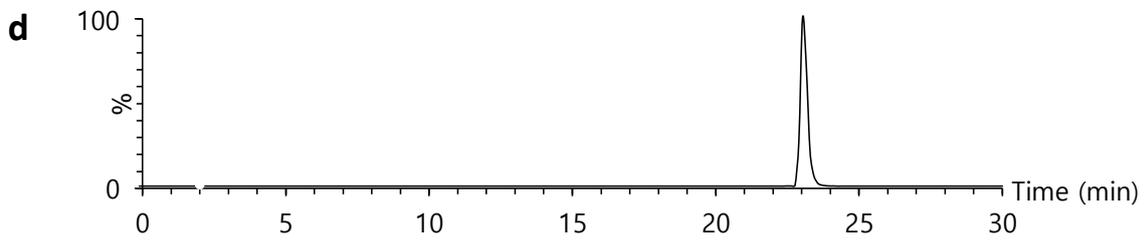

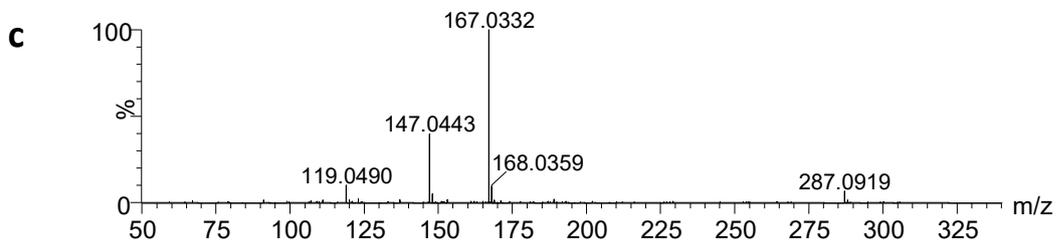

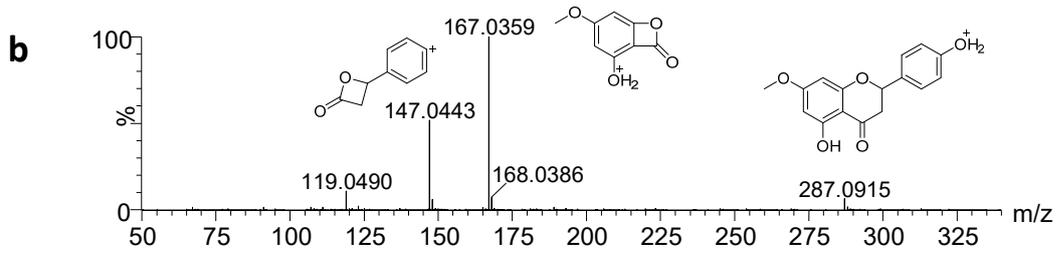

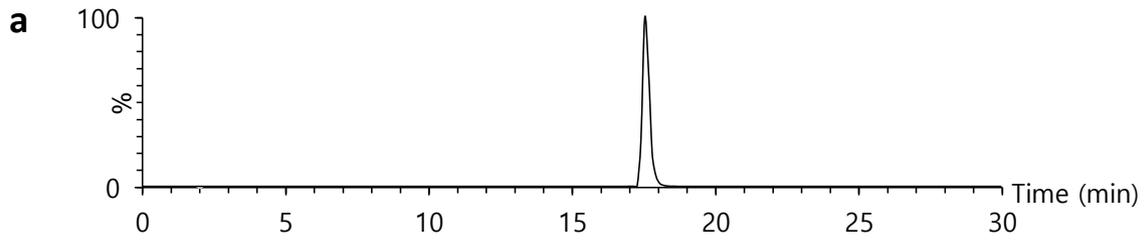

Figure S1. UPLC–qTOF–HR-MS analyses of the methylated stilbenes produced by *S. venezuelae* DHS2001 harboring pSE-SaOMT2 (DHS2001/SaOMT2). (a) UPLC–qTOF–HR-MS chromatogram selected for $m/z=243.1016$ corresponding to standard desoxyrhapontigenin. (b) MS/MS spectrum of standard desoxyrhapontigenin. (c) MS/MS spectrum of desoxyrhapontigenin from the culture extracts of DHS2001/SaOMT2 supplemented with resveratrol. (d) UPLC–qTOF–HR-MS chromatogram selected for $m/z=257.1172$ corresponding to standard 5-hydroxy-3,4'-dimethoxystilbene. (e) MS/MS spectrum of standard 5-hydroxy-3,4'-dimethoxystilbene. (f) MS/MS spectrum of 5-hydroxy-3,4'-dimethoxystilbene from the culture extracts of DHS2001/SaOMT2 supplemented with resveratrol. (g) UPLC–qTOF–HR-MS chromatogram selected for $m/z=271.1329$ corresponding to standard 3,5,4'-trimethoxystilbene. (h) MS/MS spectrum of standard 3,5,4'-trimethoxystilbene. (i) MS/MS spectrum of 3,5,4'-trimethoxystilbene from the culture extracts of DHS2001/SaOMT2 supplemented with resveratrol.

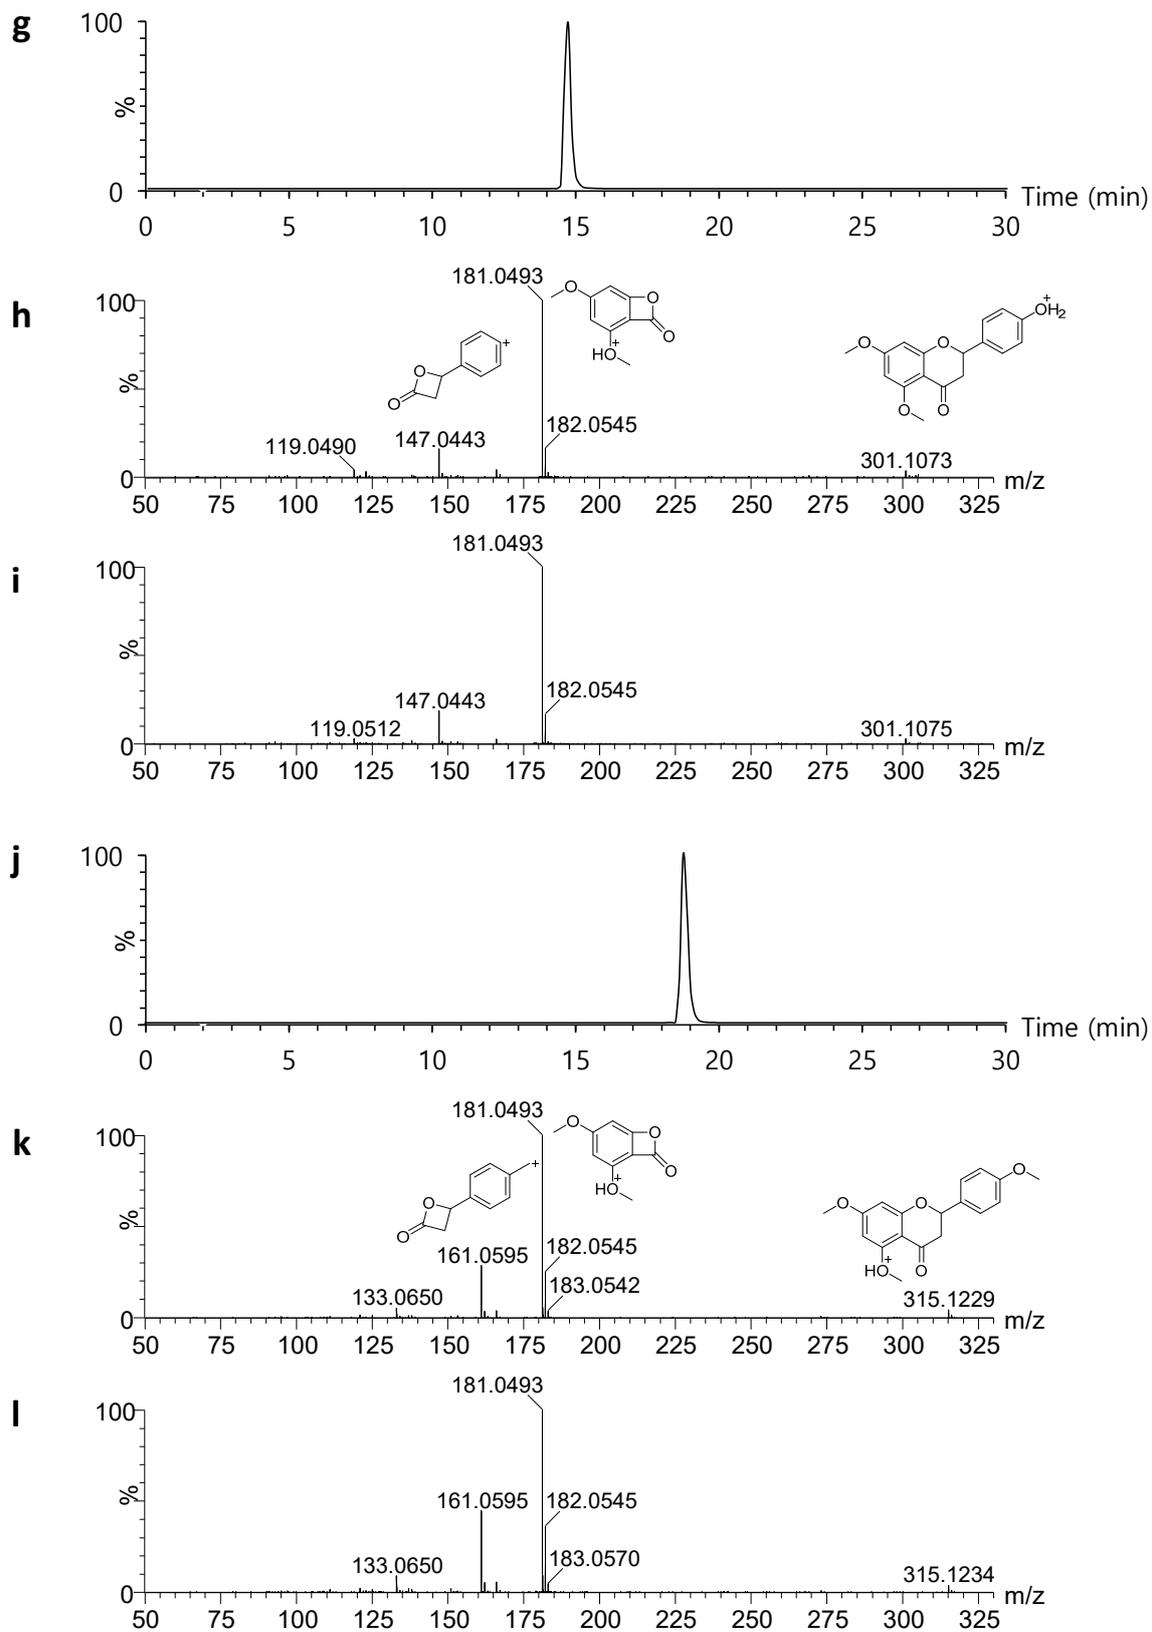

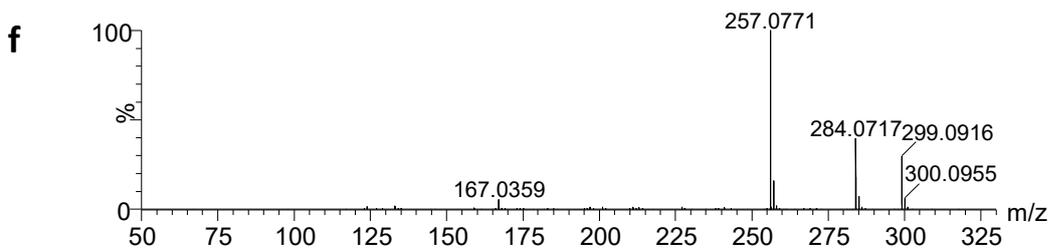

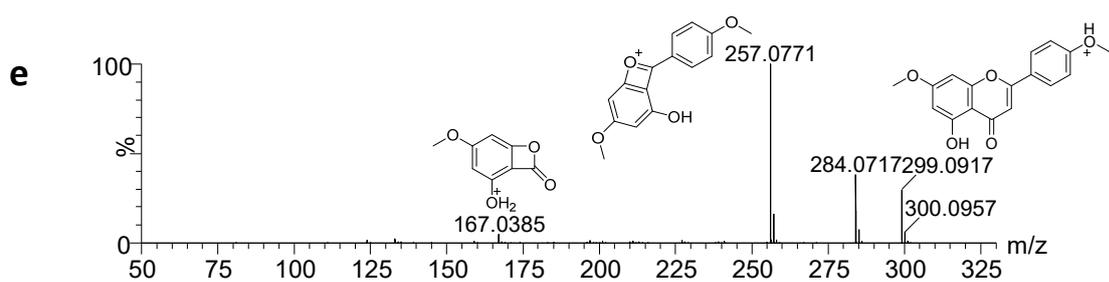

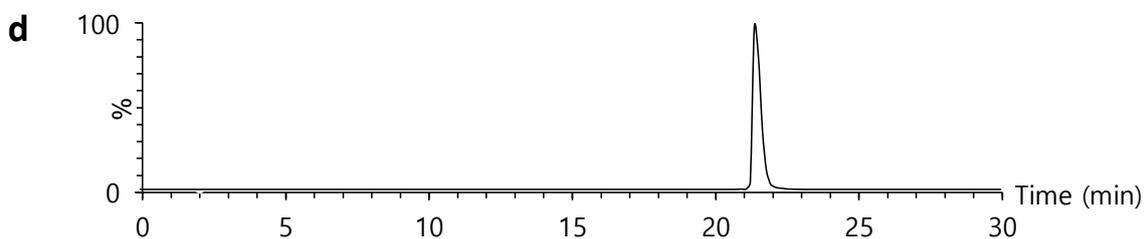

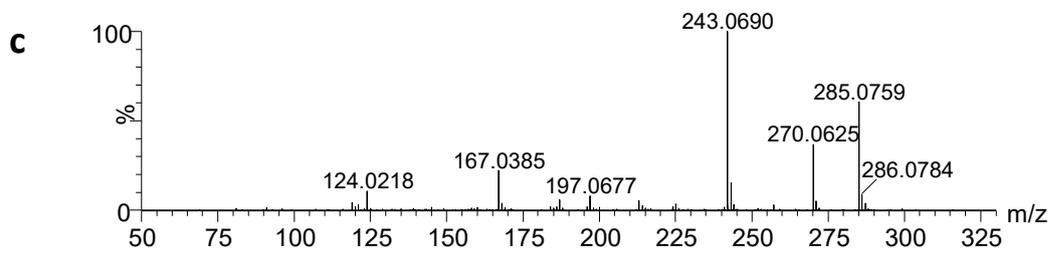

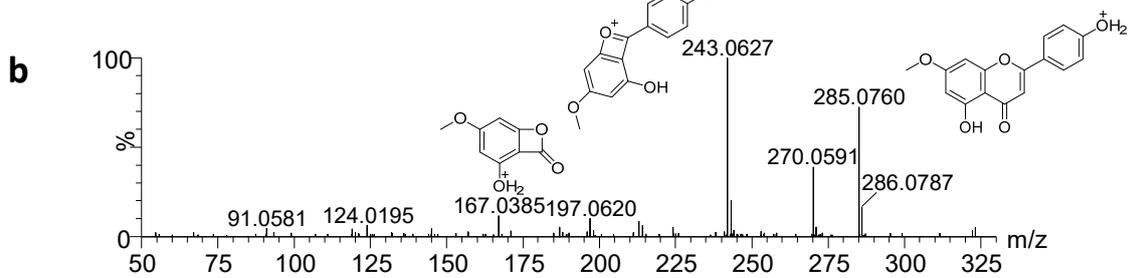

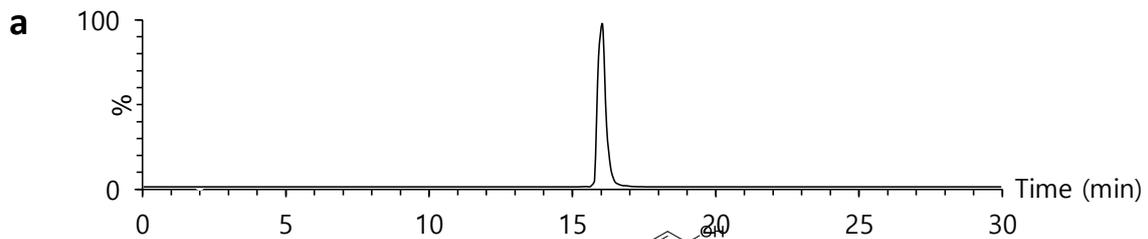

Figure S2. UPLC–qTOF–HR-MS analyses of the methylated flavanones produced by *S. venezuelae*

DHS2001 harboring pSE-SaOMT2 (DHS2001/SaOMT2). **(a)** UPLC-qTOF-MS chromatogram selected for $m/z=287.0914$ corresponding to standard sakuranetin. **(b)** MS/MS spectrum of standard sakuranetin. **(c)** MS/MS spectrum of sakuranetin from the culture extracts of DHS2001/SaOMT2 supplemented with naringenin. **(d)** UPLC-qTOF-HR-MS chromatogram selected for $m/z=301.1071$ corresponding to standard 5-hydroxy-7,4'-dimethoxyflavanone. **(e)** MS/MS spectrum of standard 5-hydroxy-7,4'-dimethoxyflavanone. **(f)** MS/MS spectrum of 5-hydroxy-7,4'-dimethoxyflavanone from the culture extracts of DHS2001/SaOMT2 supplemented with naringenin. **(g)** UPLC-qTOF-HR-MS chromatogram selected for $m/z=301.1071$ corresponding to standard 4'-hydroxy-5,7-dimethoxyflavanone. **(h)** MS/MS spectrum of standard 4'-hydroxy-5,7-dimethoxyflavanone. **(i)** MS/MS spectrum of 4'-hydroxy-5,7-dimethoxyflavanone from the culture extracts of DHS2001/SaOMT2 supplemented with naringenin. **(j)** UPLC-qTOF-HR-MS chromatogram selected for $m/z=315.1227$ corresponding to standard 5,7,4'-trimethoxyflavanone. **(k)** MS/MS spectrum of standard 5,7,4'-trimethoxyflavanone. **(l)** MS/MS spectrum of 5,7,4'-trimethoxyflavanone from the culture extracts of DHS2001/SaOMT2 supplemented with naringenin.

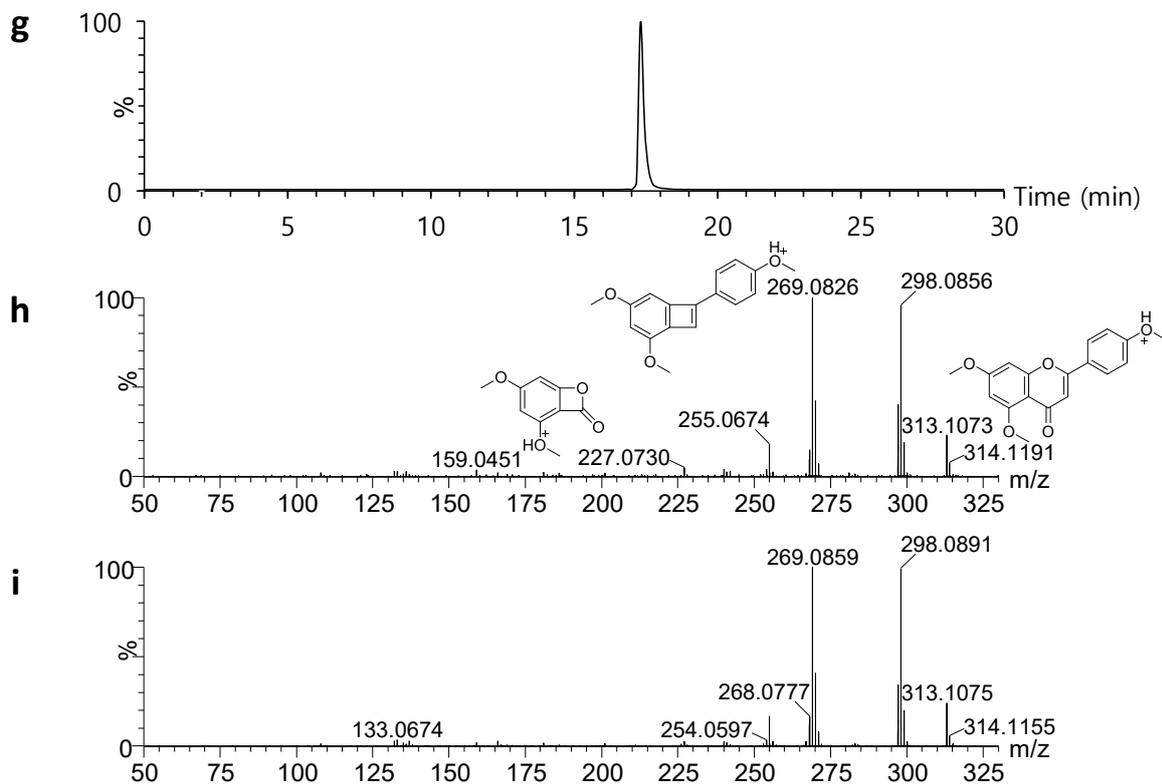

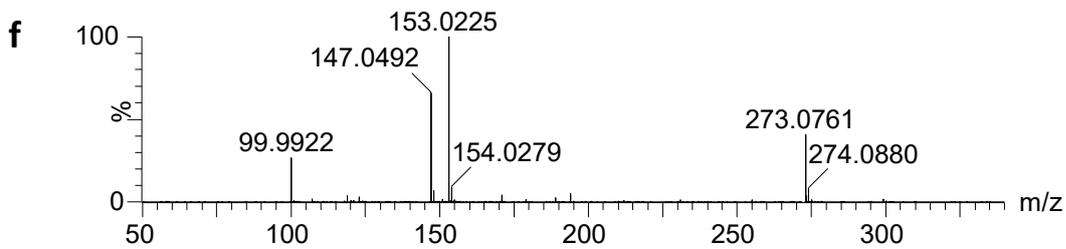

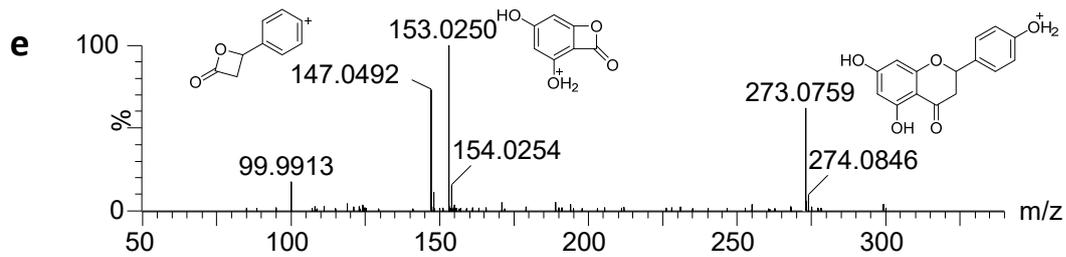

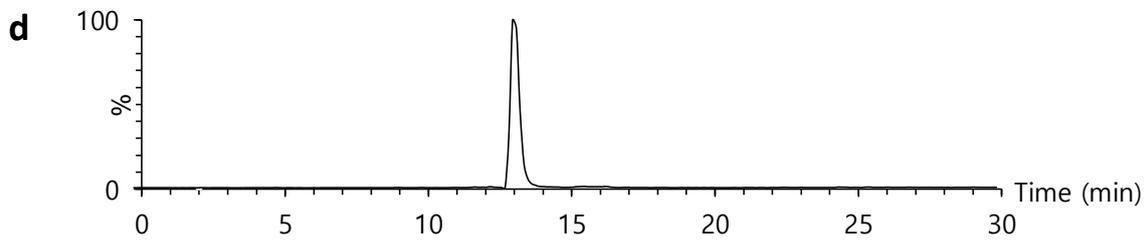

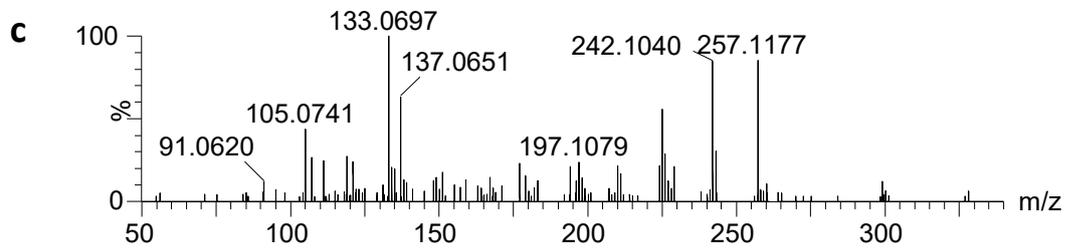

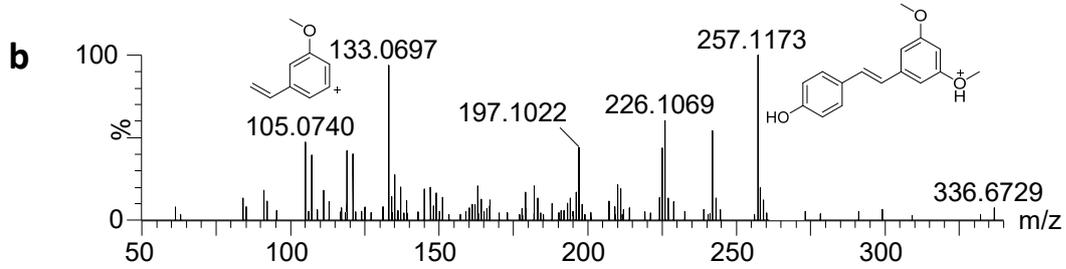

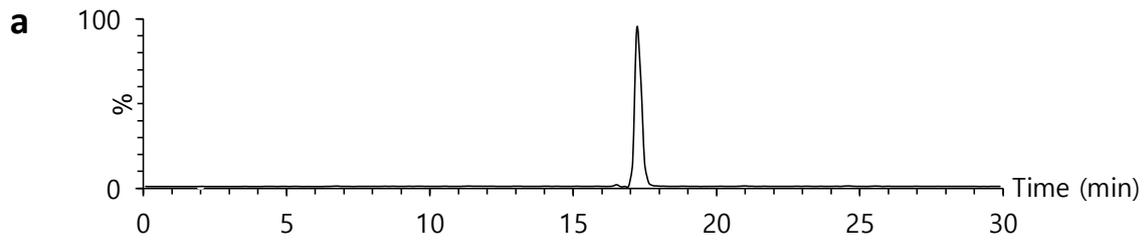

Figure S3. UPLC–qTOF–HR-MS analyses of the methylated flavones produced by *S. venezuelae* DHS2001 harboring pSE-SaOMT2 (DHS2001/SaOMT2). (a) UPLC–qTOF–HR-MS chromatogram selected for $m/z=285.0757$ corresponding to standard genkwanin. (b) MS/MS spectrum of standard genkwanin. (c) MS/MS spectrum of genkwanin from the culture extracts of DHS2001/SaOMT2 supplemented with apigenin. (d) UPLC–qTOF–HR-MS chromatogram selected for $m/z=299.0914$ corresponding to standard 5-hydroxy-7,4'-dimethoxyflavone. (e) MS/MS spectrum of standard 5-hydroxy-7,4'-dimethoxyflavone. (f) MS/MS spectrum of 5-hydroxy-7,4'-dimethoxyflavone from the culture extracts of DHS2001/SaOMT2 supplemented with apigenin. (g) UPLC–qTOF–HR-MS chromatogram selected for $m/z=313.1071$ corresponding to standard 5,7,4'-trimethoxyflavone. (h) MS/MS spectrum of standard 5,7,4'-trimethoxyflavone. (i) MS/MS spectrum of 5,7,4'-trimethoxyflavone from the culture extracts of DHS2001/SaOMT2 supplemented with apigenin.

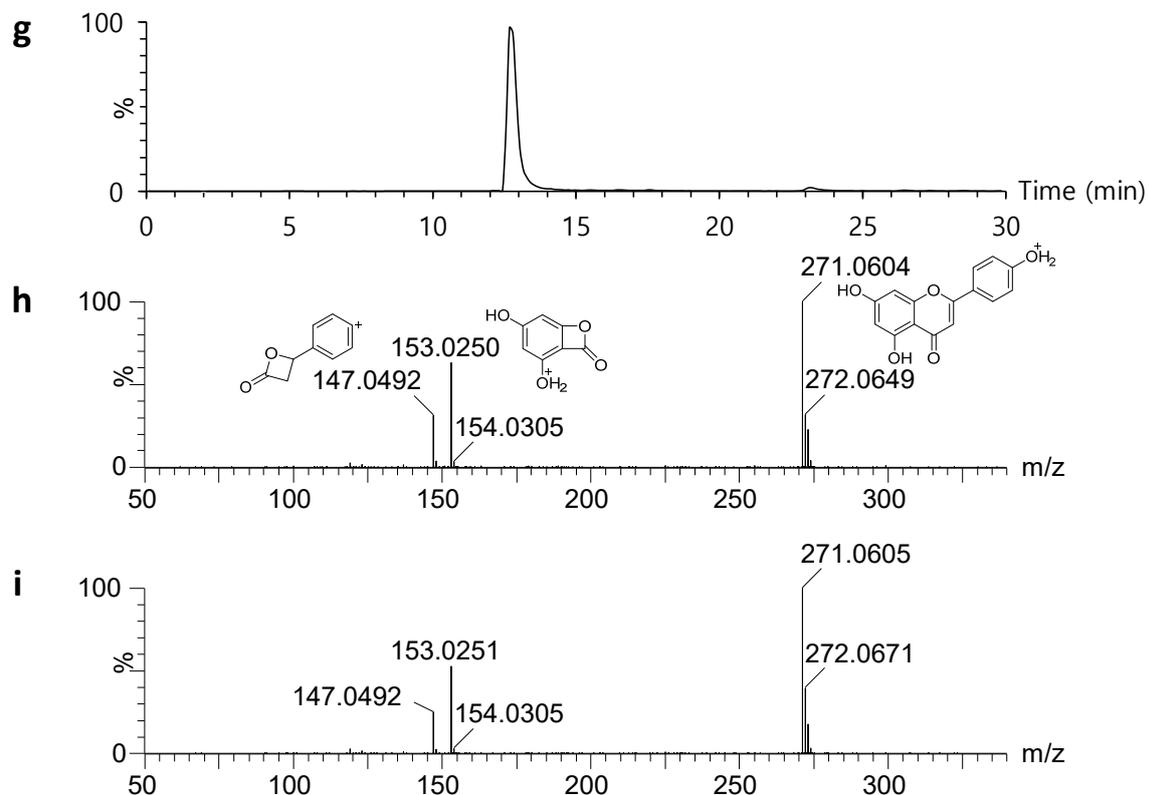

Figure S4. UPLC–qTOF–HR-MS analyses of the pterostilbene, naringenin and apigenin produced by *E. coli* mutants. **(a)** UPLC–qTOF–HR-MS chromatogram selected for $m/z=257.1172$ corresponding to standard pterostilbene. **(b)** MS/MS spectrum of standard pterostilbene. **(c)** MS/MS spectrum of pterostilbene obtained from BL21/PTS supplemented with 4-coumaric acid. **(d)** UPLC–qTOF–HR-MS chromatogram selected for $m/z=273.0757$ corresponding to standard naringenin. **(e)** MS/MS spectrum of standard naringenin. **(f)** MS/MS spectrum of naringenin obtained from BL21/NRG supplemented with 4-coumaric acid. **(g)** UPLC–qTOF–HR-MS chromatogram selected for $m/z=271.0601$ corresponding to standard apigenin. **(h)** MS/MS spectrum of standard apigenin. **(i)** MS/MS spectrum of apigenin obtained from BL21/APG supplemented with 4-coumaric acid.

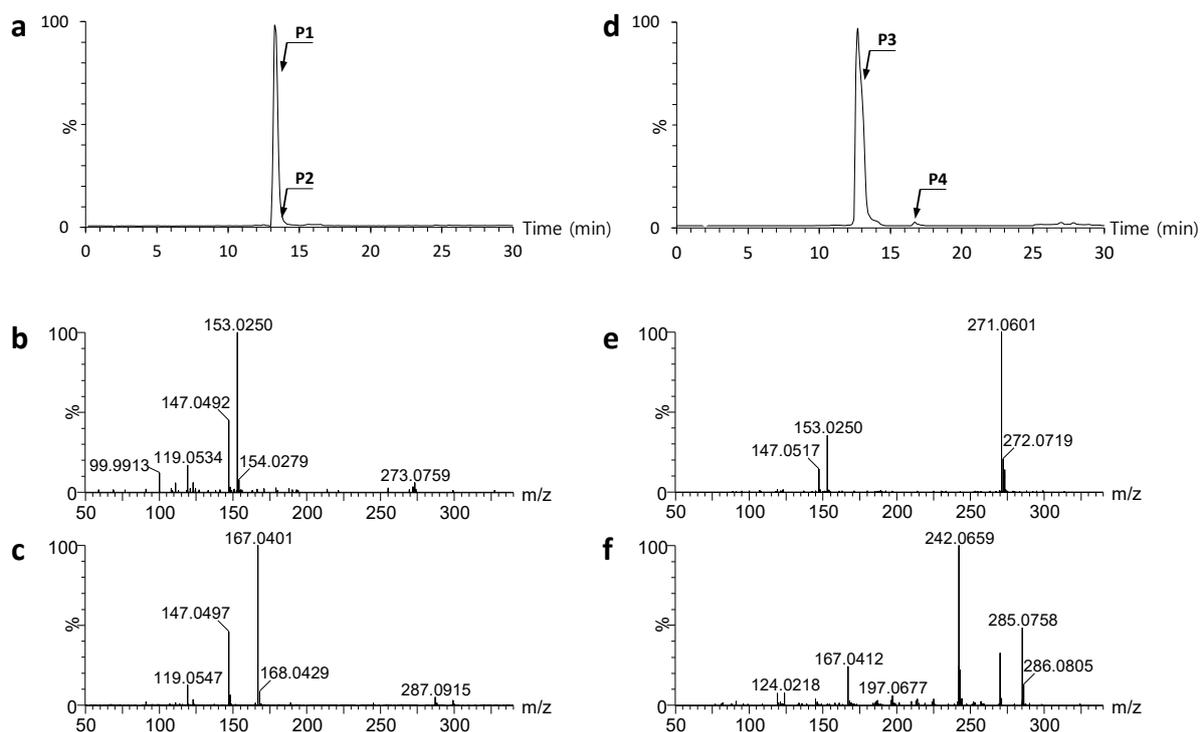

Figure S5. UPLC–qTOF–HR-MS analyses of methylated flavanone and methylated flavone produced by *E. coli* BL21(DE3) harboring pNRG-SaOMT2 and pAPG-SaOMT2, respectively. (a) UPLC–qTOF–HR-MS chromatogram selected for $m/z=273.0757$ and 287.0914 corresponding to naringenin (**P1**) and sakuranetin (**P2**), respectively, of culture extracts from BL21/NRG-SaOMT2. (b) MS/MS spectrum selected for $m/z=273.0757$ of naringenin obtained from BL21/NPG-SaOMT2 supplemented with 4-coumaric acid. (c) MS/MS spectrum selected for $m/z=287.0914$ of sakuranetin obtained from BL21/NPG-SaOMT2 supplemented with 4-coumaric acid. (d) UPLC–qTOF–HR-MS chromatogram selected for $m/z=271.0601$ and 285.0757 corresponding to apigenin (**P3**) and genkwainin (**P4**), respectively, of culture extracts obtained from BL21/APG-SaOMT2. (e) MS/MS spectrum selected for $m/z=271.0601$ of apigenin obtained from BL21/APG-SaOMT2 supplemented with 4-coumaric acid. (f) MS/MS spectrum selected for $m/z=285.0757$ of genkwainin obtained from BL21/APG-SaOMT2 supplemented with 4-coumaric acid.
