

LLP: Large-scale loss of protein
Mis: Missense

Supplementary figure S2(i): The correlation between each of the clinical symptoms and the variant types.

The judged severity of each of the clinical symptoms of the CRD patients extracted from the literature (Supplementary Table S3) was analyzed for the correlation with the combination of variant type (LLP/LLP or LLP/Mis).

(i) In BCVA (a), the color vision (b), fundus photograph (c), visual field (d), and OCT (e) results showed a more relative number of patients with the LLP/LLP combination than that with the LLP/Mis.
