Link 1983	902	780	86			
Total	3451	3174	92	1959	1815	93

(1) Studies that included only patients with NIND and SC are shown and used for specificity calculation.

Publication	Total N of IND and PIND	Studies with mixed groups (2) IND and PIND exluded - Best OCB Case			Studies with mixed groups (3) IND and PIND exluded - Worst OCB Case		
		Total N of controls	N of OCB negative patients	Specificity (%)	Total N of controls	N of OCB negative patients	Specificity (%)
Bayart 2018							
Christiansen 2018	3	94	91	97	94	88	94

(2) Studies that included patients with NIND/SC and IND/PIND are shown. The N of patients with IND/PIND are substracted from the total N of controls, but not from the N of OCB negative patients. This approach results in a "Best OCB" scenario, where excluded IND/PIND are considered OCB positive.

(3) Studies that included patients with NIND/SC and IND/PIND are shown. The N of patients with IND/PIND are substracted from the total N of controls and from the N of OCB negative patients. This approach results in a "Worst OCB" scenario, where excluded IND/PIND are considered OCB negative.

Publication	ALL STUDIES (4) IND and PIND excluded - Best OCB Case			ALL STUDIES (5) IND and PIND excluded - Worst OCB Case		
	Total N of controls	N of OCB negative patients	Specificity (%)	Total N of controls	N of OCB negative patients	Specificity (%)

(4) Studies from (1) and (2) are combined.

(5) Studies from (1) and (3) are combined.

Abbreviations: IND, inflammatory neurological disease; N, number; OCB, oligoclonal bands; PIND, peripheral inflammatory neurological disease; SC, symptomatic control
