**Table S1.** The table lists the coastal (48, 51, 54, 58a, 58b, 61, 64a, 64b) and open ocean (11, 14, 15, 24) stations sampled for SPM using multiple *in situ* pump devices, during the NBP13-0 cruise (June–July 2013) aboard of the *R/V Nathaniel B. Palmer*. For each cast the depth (meters) of the sampling and the corresponding potential density ( $\sigma_0$ ,  $\text{kg m}^{-3}$ ), the oxygen concentration measured ( $\mu\text{mol kg}^{-1}$ ), the location (DMS, longitude and latitude), the date (dd/mm/yyyy) and the volume of water filtered by the pump deployed (Liters) are reported.

Station*	Depth of SPM sampling	Potential density	O <sub>2</sub>	Location DMS (lon/lat)		Date	Amount of water filtered**
nr	(m)	( $\text{kg m}^{-3}$ )	( $\mu\text{mol kg}^{-1}$ )	S	W	dd/mm/yyyy	(L)

**Figure S1.** Dot plot of the correlation matrix obtained by applying a Pearson analysis to the total archaeal 16S rRNA gene reads (copies L<sup>-1</sup>) of the archaeal groups detected in the ETSP at the (a) coastal and (b) open ocean stations. Dark blue corresponds to +1 r values, indicating a strong positive linear correlation between archaeal groups; white corresponds to 0 r values, indicating that no correlation exists; dark red corresponds to -1 r values, indicating a strong negative linear correlation.

**Figure S2.** Dot plot of the correlation matrix obtained by applying a Pearson analysis to the archaeal IPLs (response units per Liter; r.u. L<sup>-1</sup>) detected in the ETSP, at the (a) coastal and (b) open ocean stations. Dark blue corresponds to +1 r values, indicating a strong positive linear correlation between archaeal groups; white corresponds to 0 r values, indicating that no correlation exists; dark red corresponds to -1 r values, indicating a strong negative linear correlation.
