

Supplementary Figure 4

(a,c) Representative graph of four biological replicates showing the growth of H37Rv and H37Rv-Δ0565c deletion mutant (a) or 631 and 631-Δ0565c deletion mutant (c) in varying concentrations of ETH. Points represent the mean of three technical replicates. (b,d) Paired area-under-the-curve measurements across 4 biological replicates for H37Rv (b) and strain 631 (d). The numbers to the right of each point represent the ratio of AUC of the deletion to wildtype. ** p < 0.01 two-tailed paired t-test of AUC values.
