

Supplementary Figure 1A

miR-148a level after pCDH-*miR-148a* vector transfected into HCT116 and HT29

Supplementary Figure 1B

miR-148a level after pCDH-*miR-148a* vector transfected into SW480, SW620, and Caco-2

Caco-2 cell line

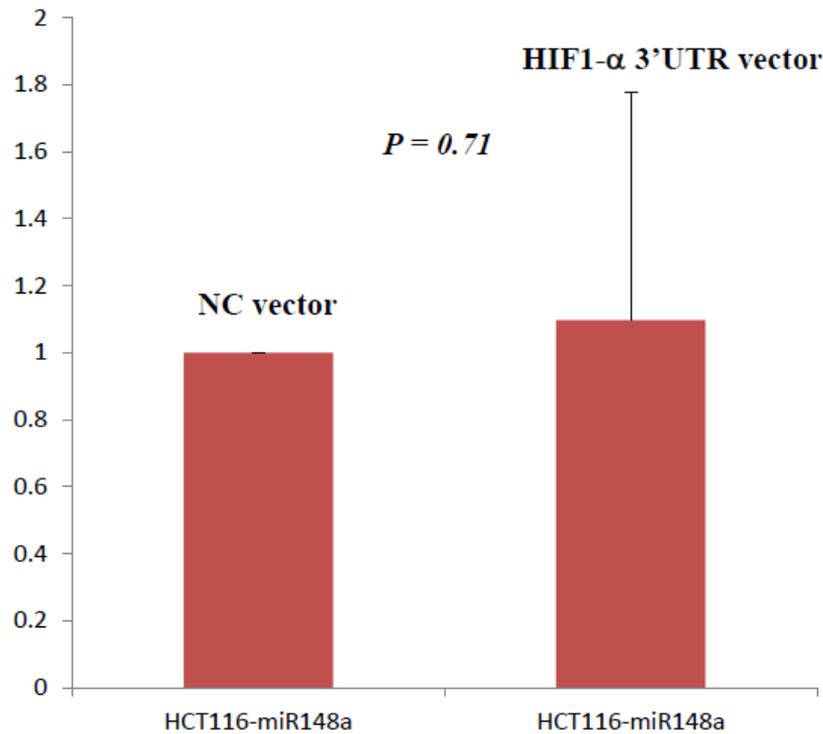

pCDH-*miR-148a* vector transfected into Caco-2 cell line was not successfully performed. Therefore, constant *miR-148a* level in transfected Caco-2 was not determined.

Supplementary Figure 2

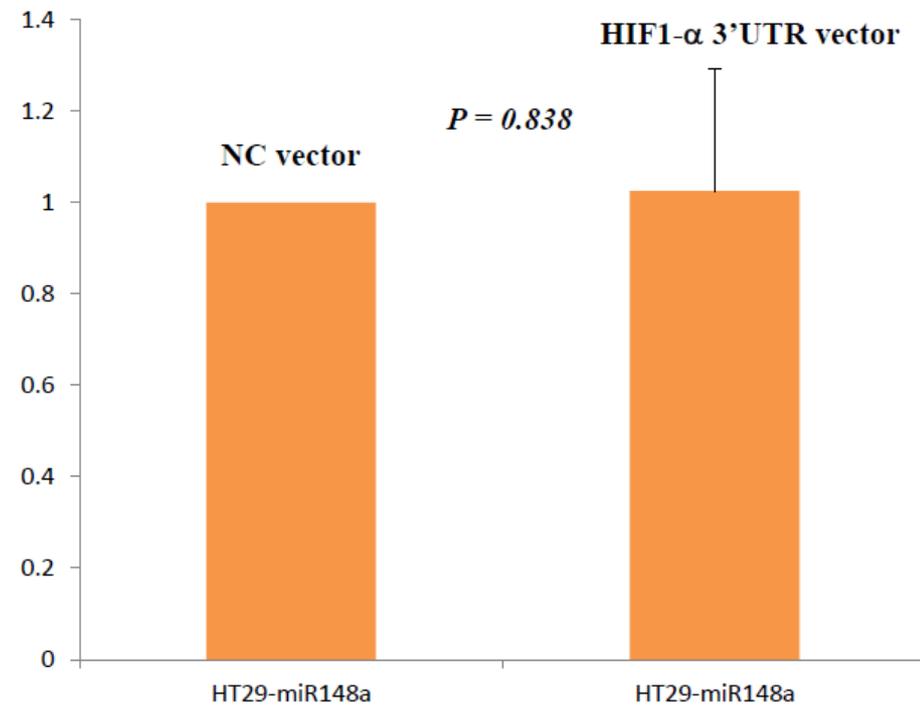

miR-148a indirectly inhibits the HIF-1 α by luciferase assay in HCT116 and HT29 cell lines

Reporter assay (Luciferase assay):

A

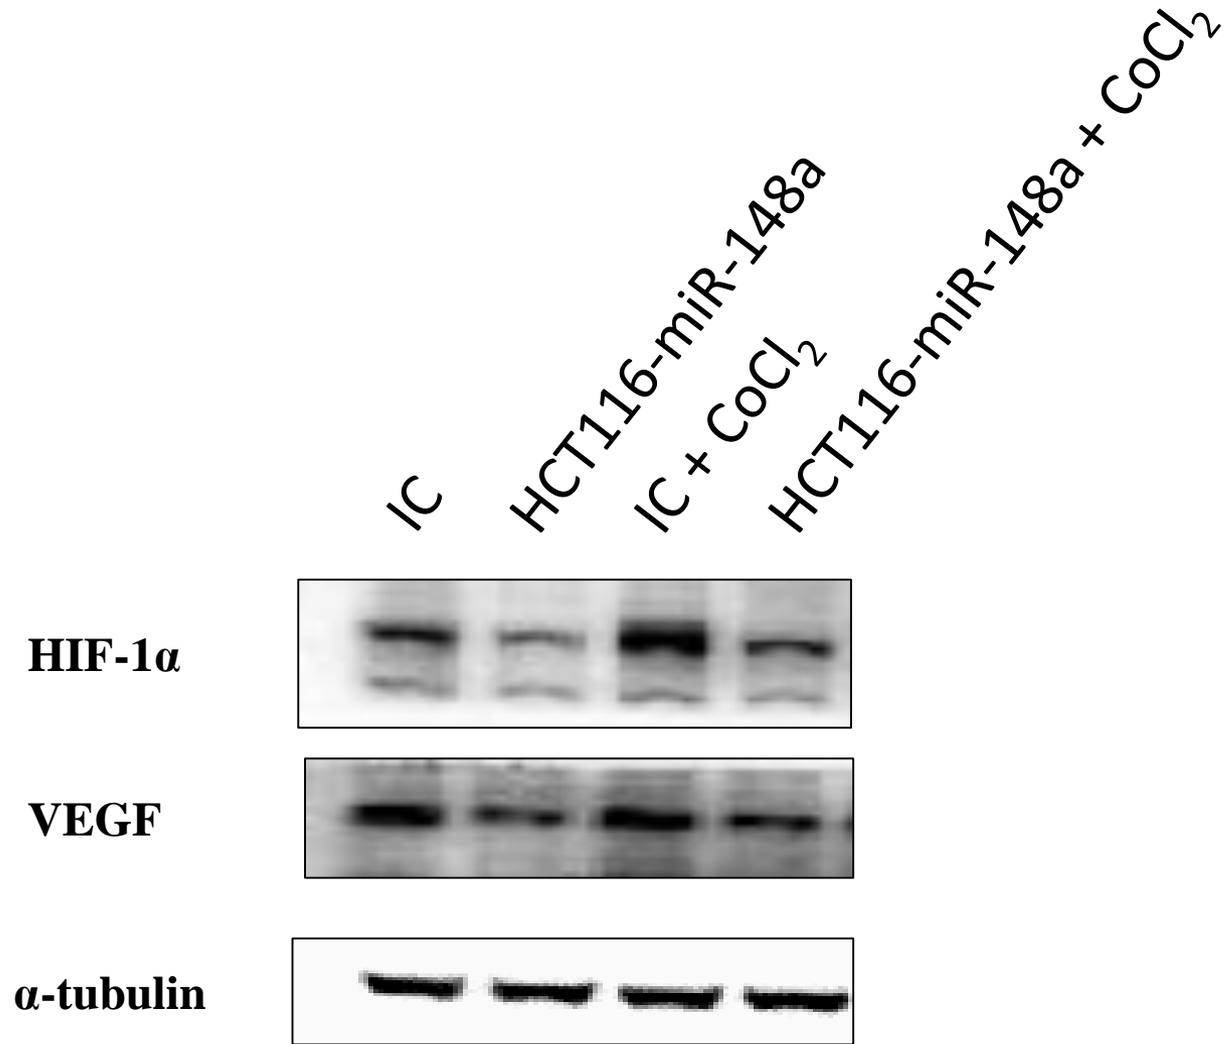

B

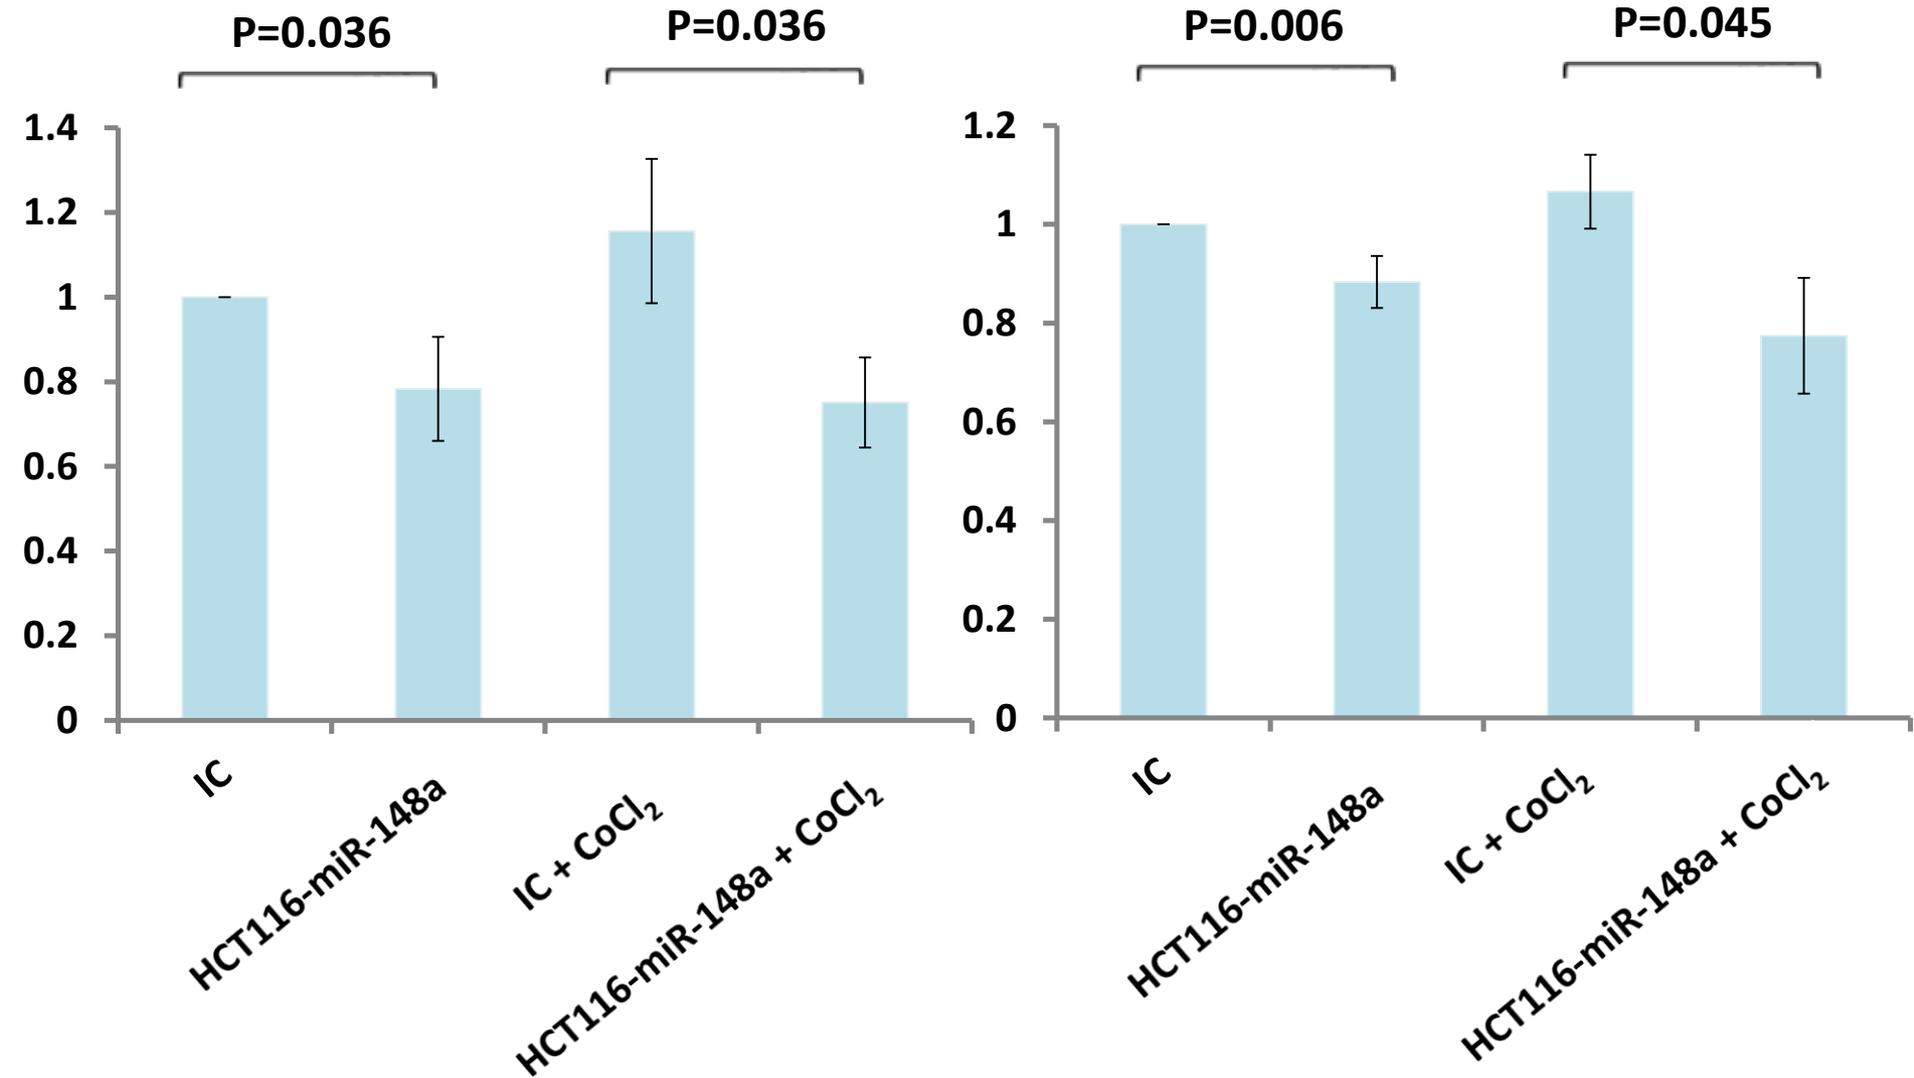

Supplementary Figure 3

A HCT116 (Full-length blots/gels are presented in Supplementary Figure 4A)

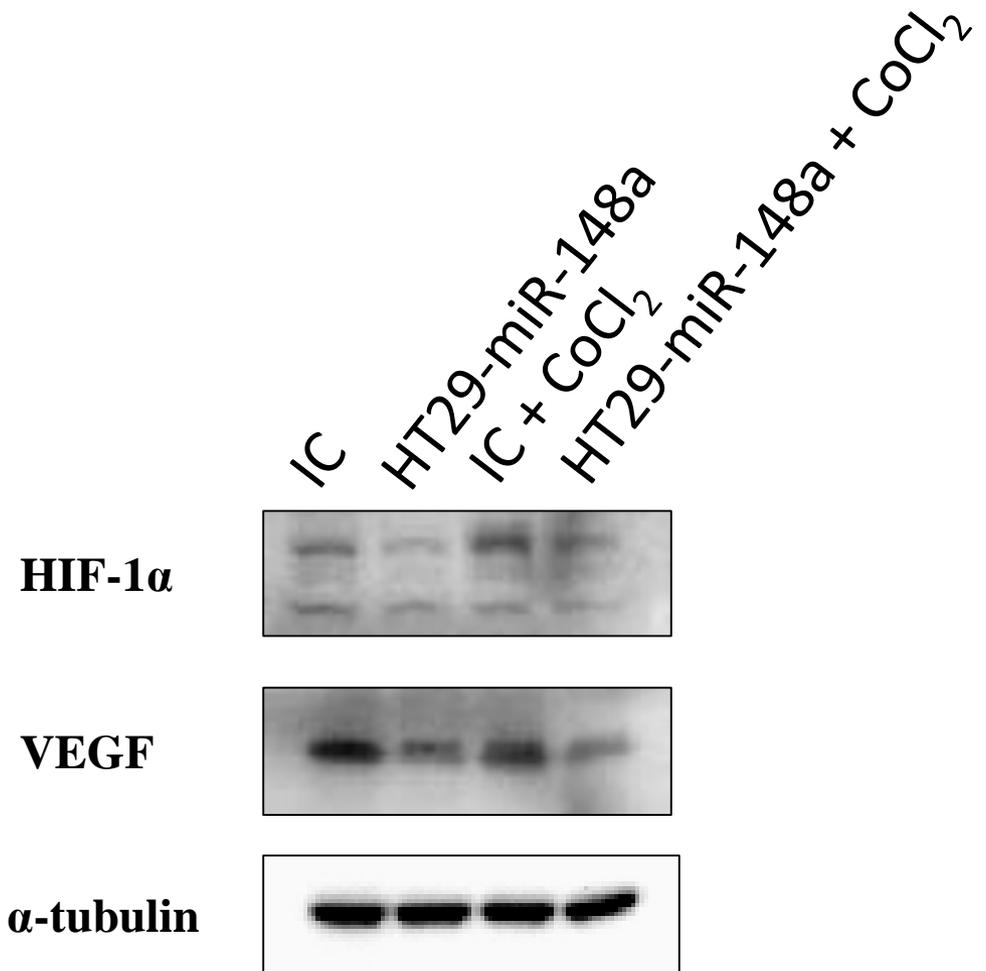

HCT116 HIF-1 α

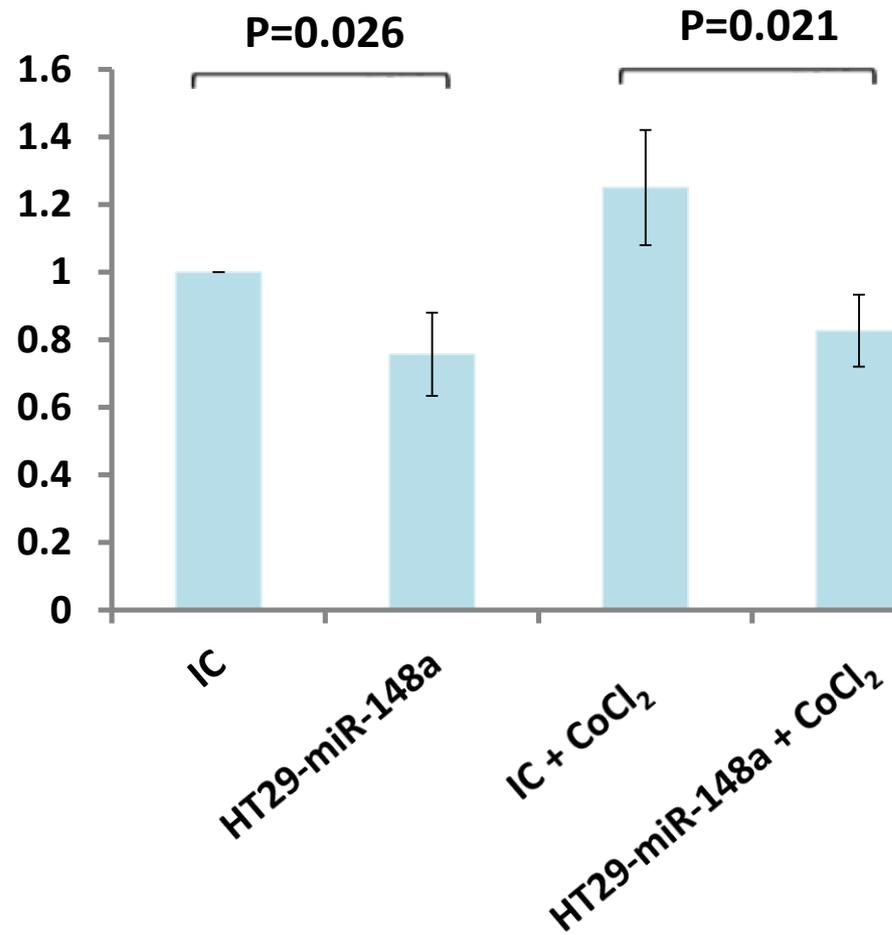

HCT116 VEGF

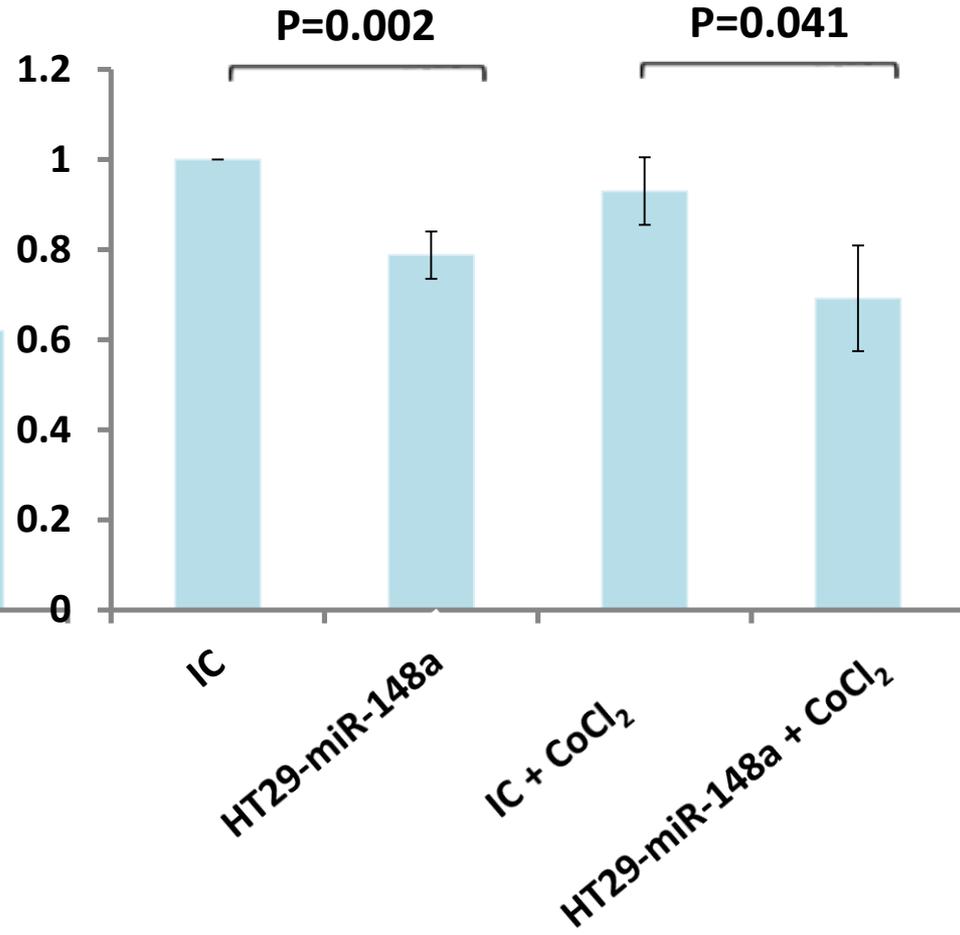

B HT29 (Full-length blots/gels are presented in Supplementary Figure 4B)

HT29 HIF-1 α

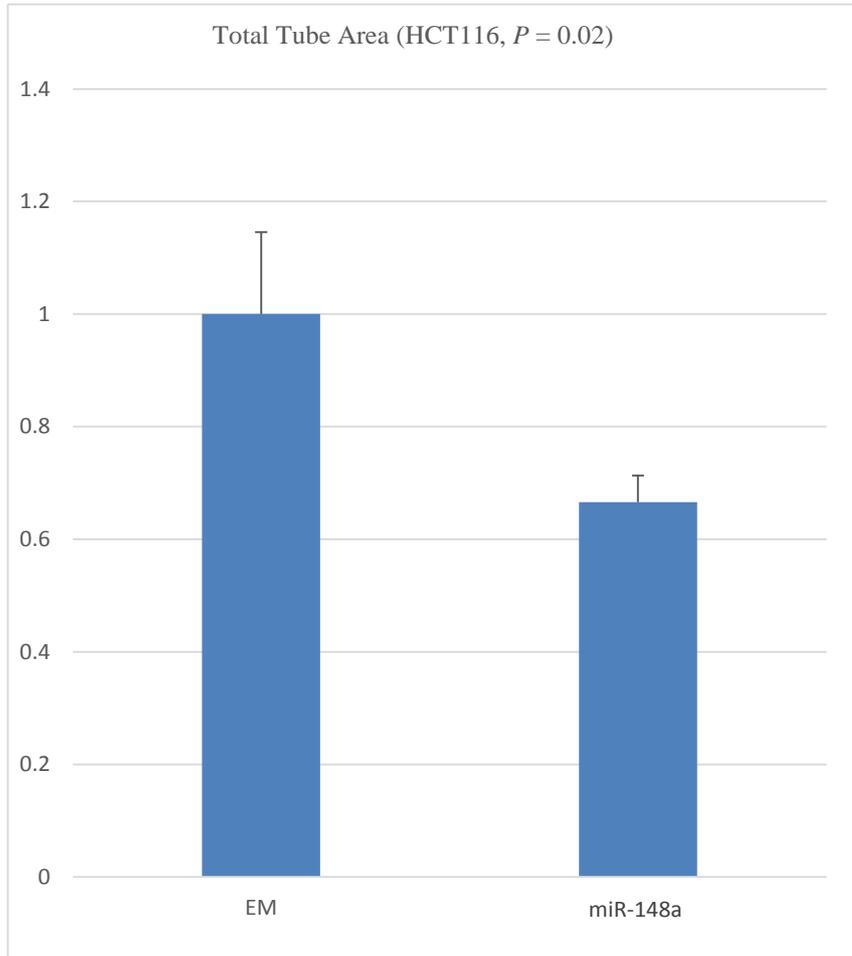

HT29 VEGF

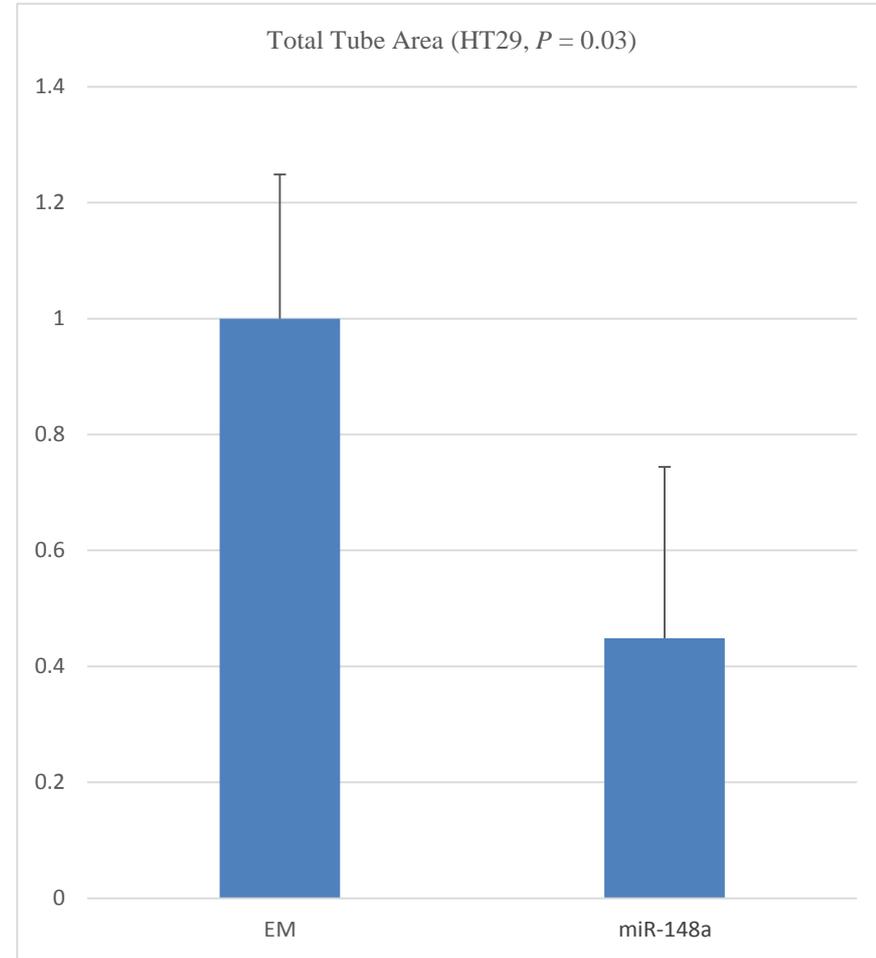

Supplementary Figure 4

HUVEC tube formation assay:

A

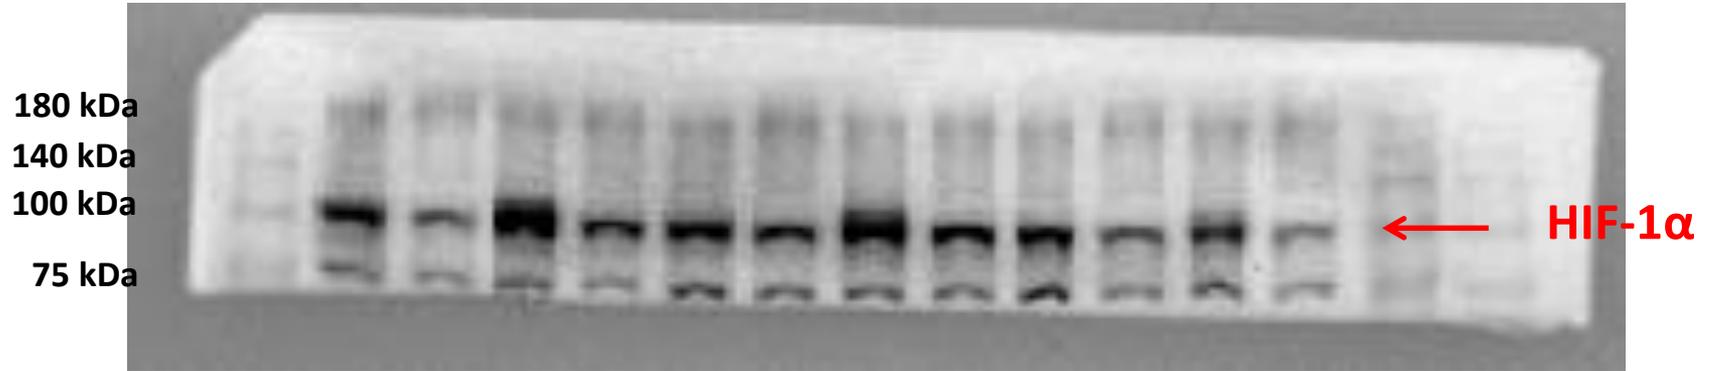

B

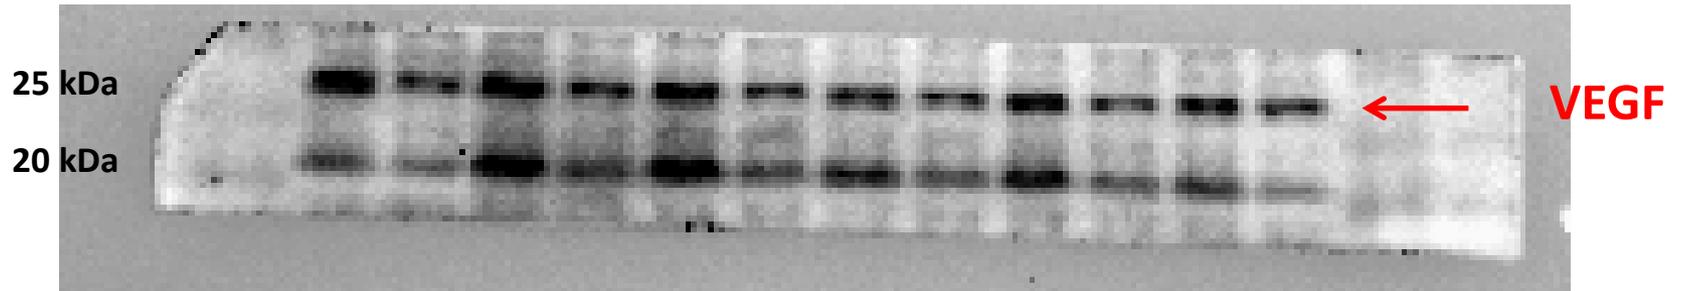

Supplementary Figure 5

A HCT116 (Full-length blots/gels)

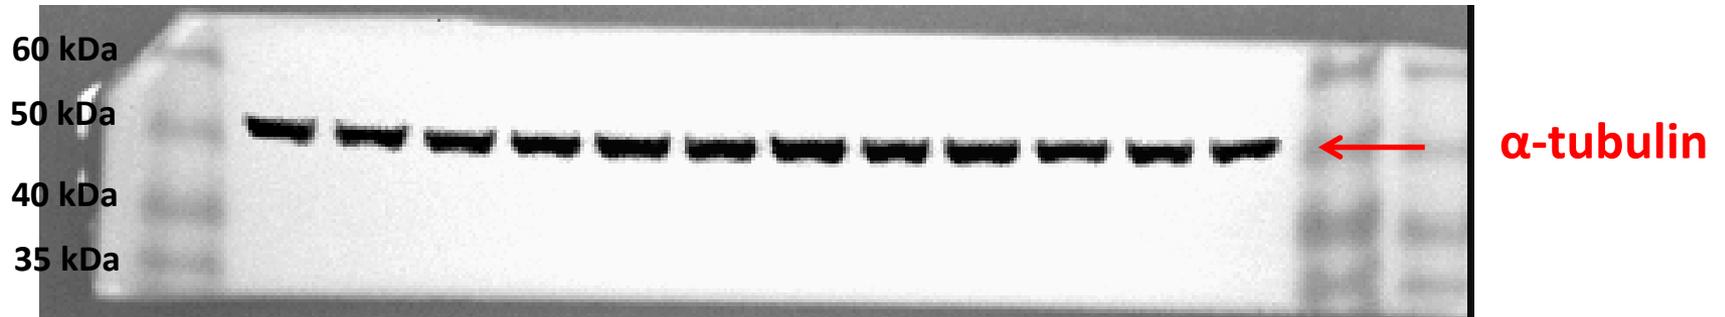

HIF-1 α

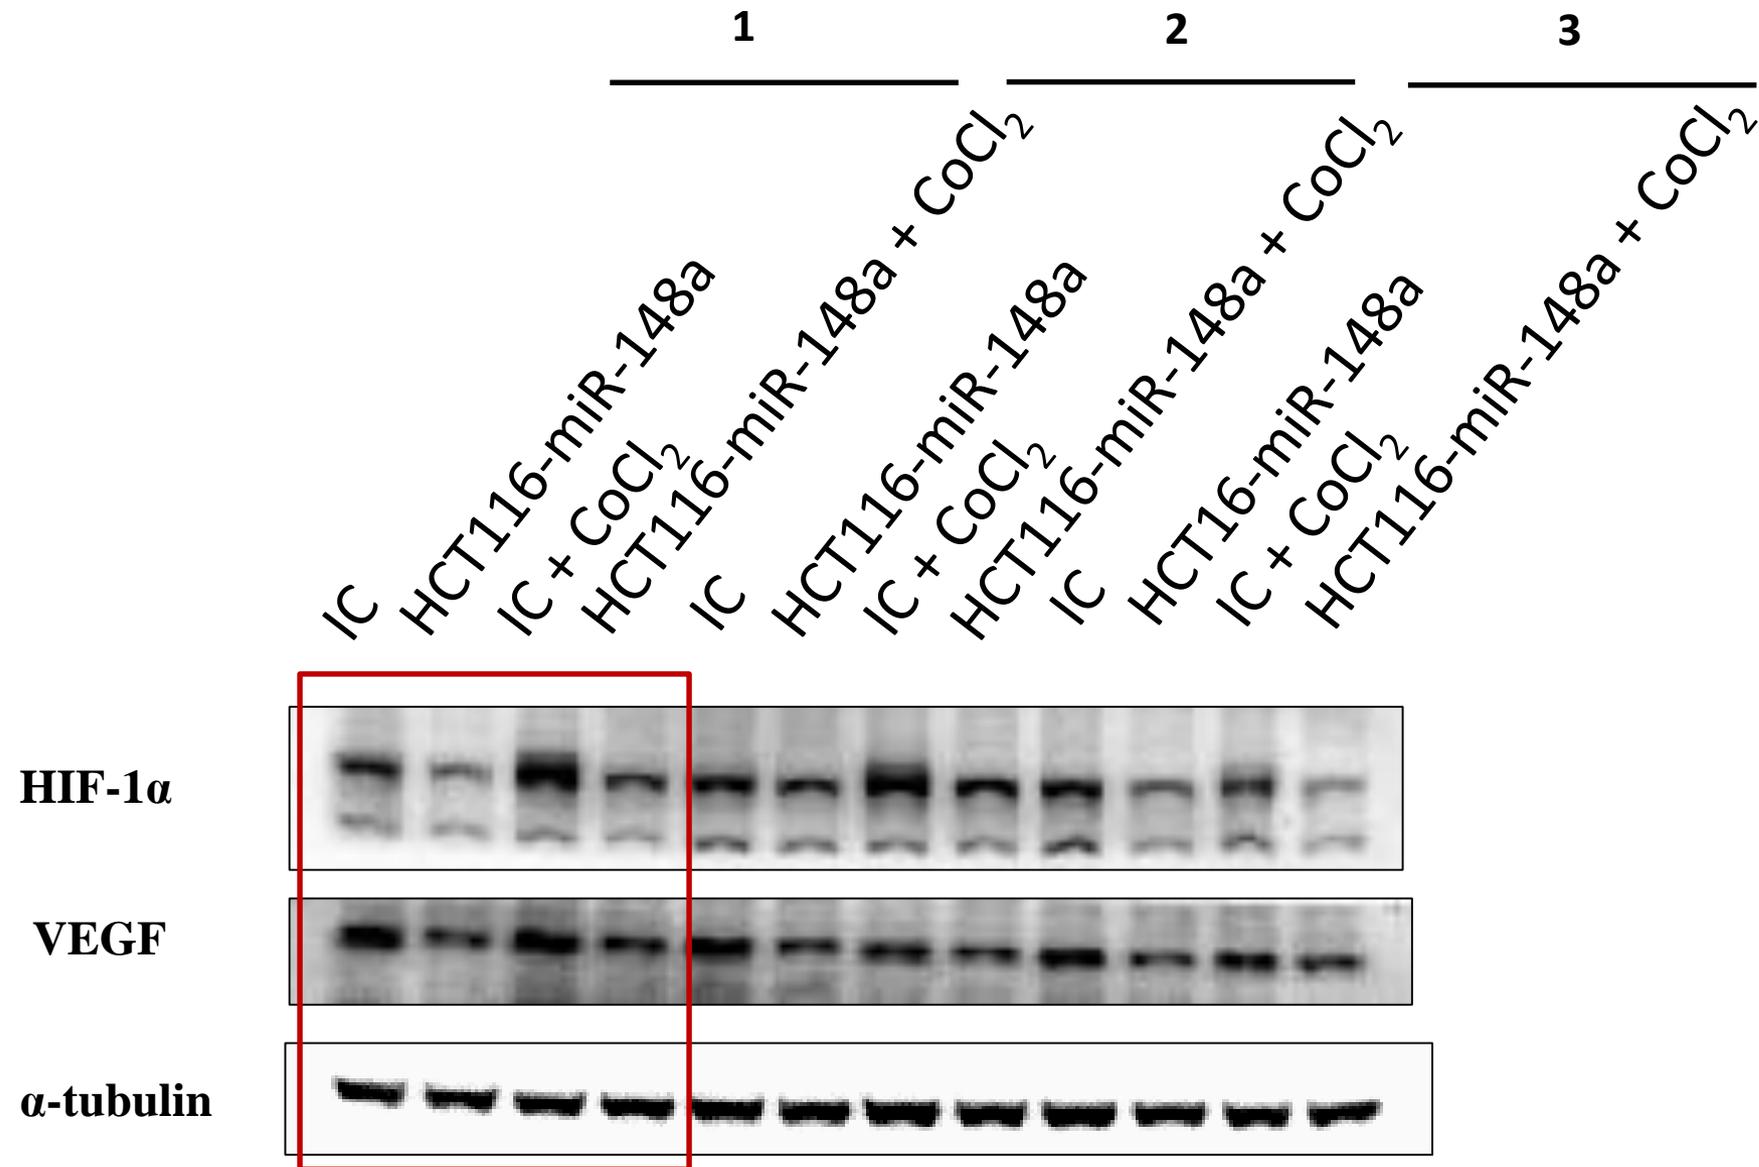

VEGF

α -tubulin

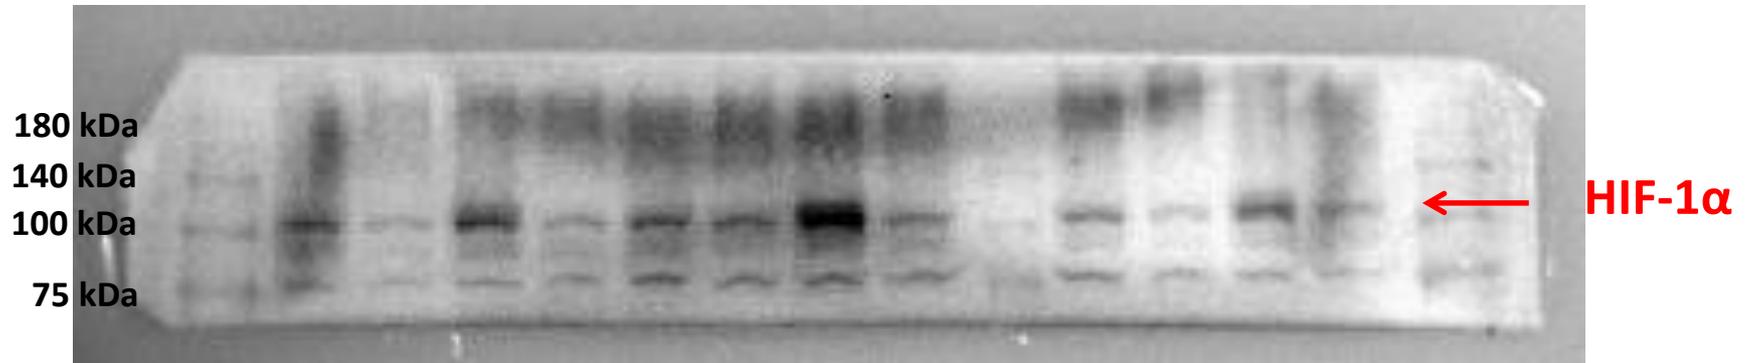

HCT116 (N=3)

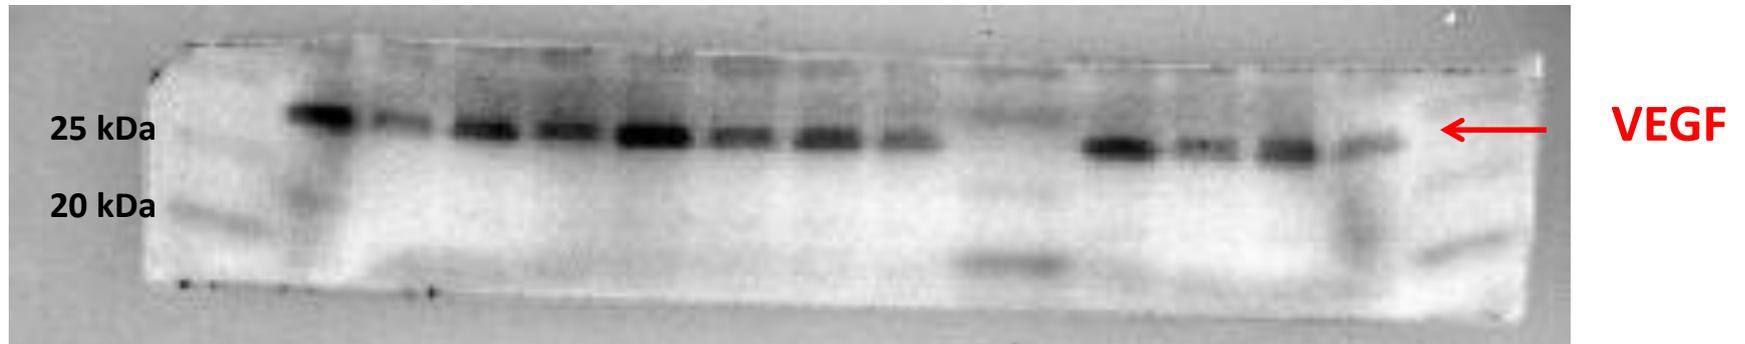

B HT29 (Full-length blots/gels)

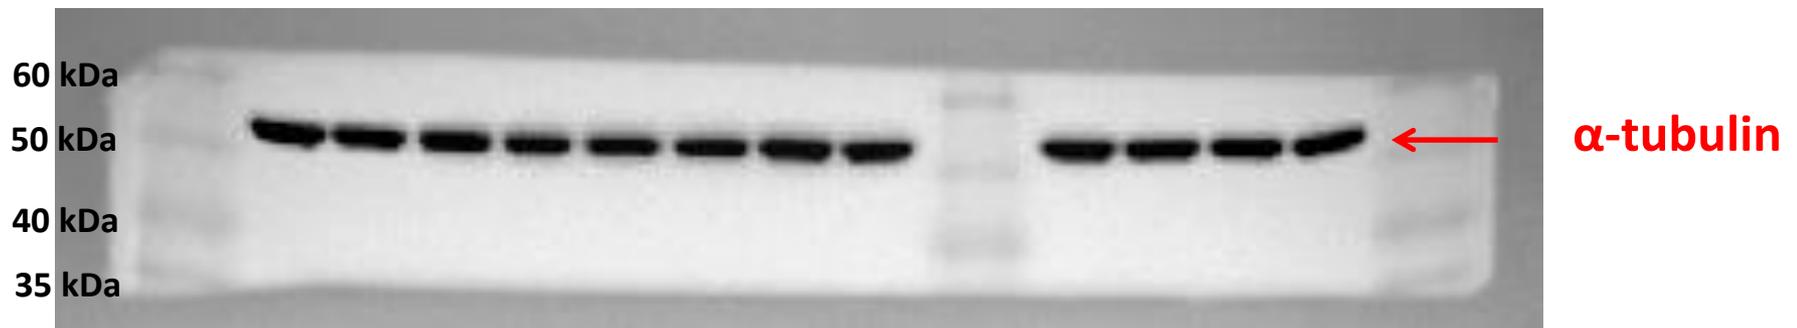

HIF-1 α

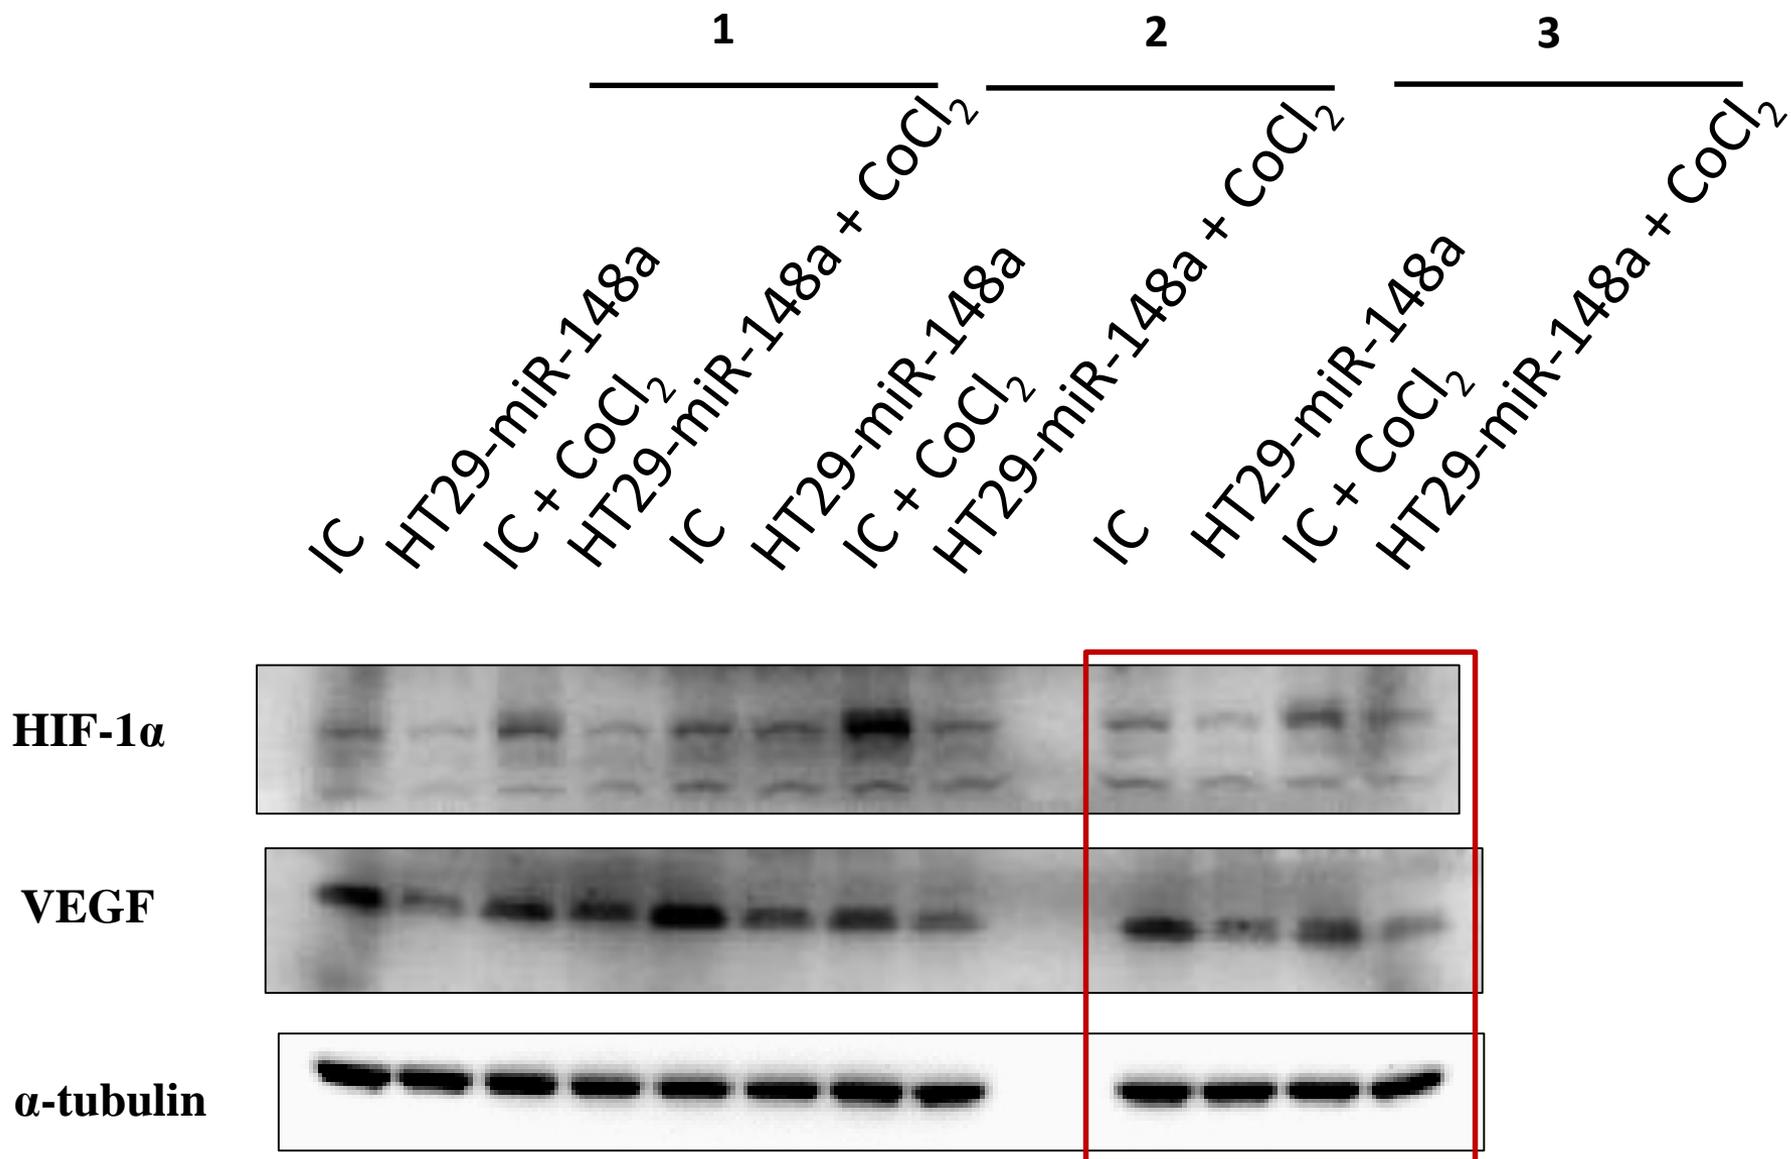

VEGF

α -tubulin

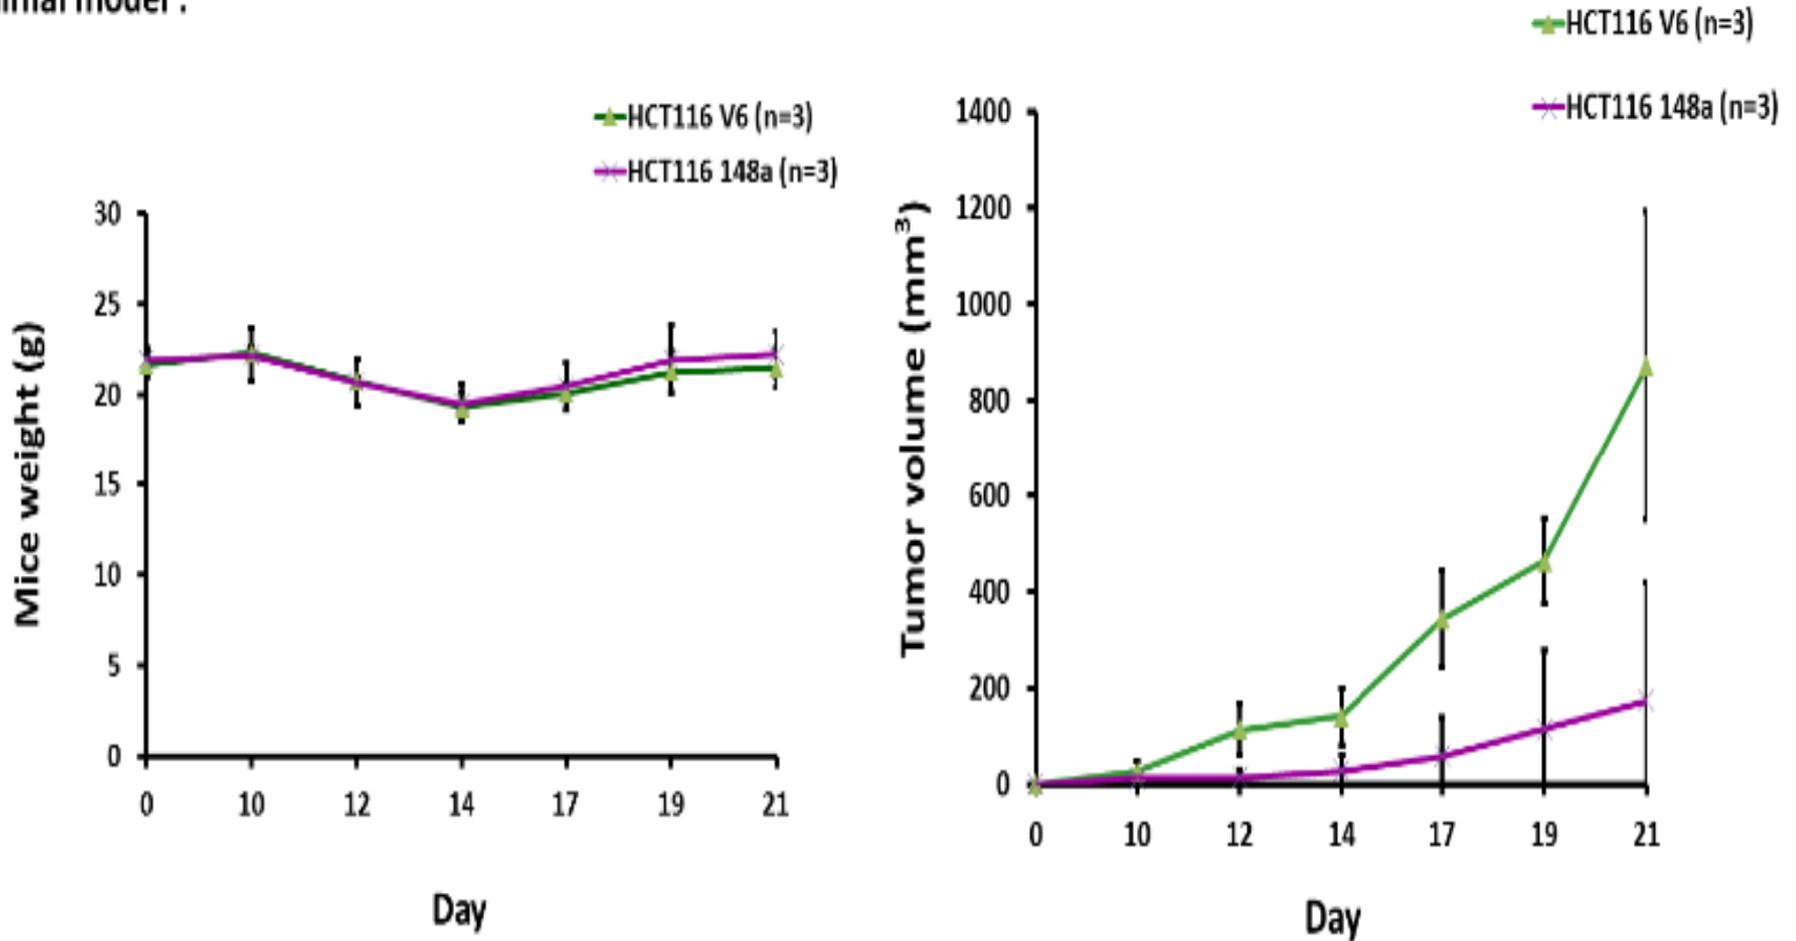

HT29 (N=3)

Supplementary Figure 6

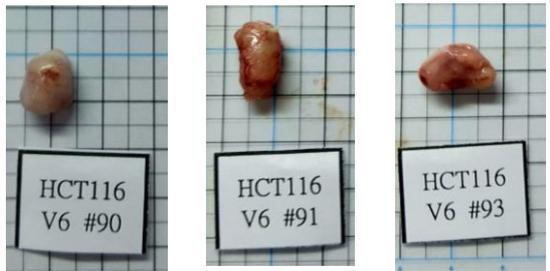

A HCT116 (N=3)

Animal model :

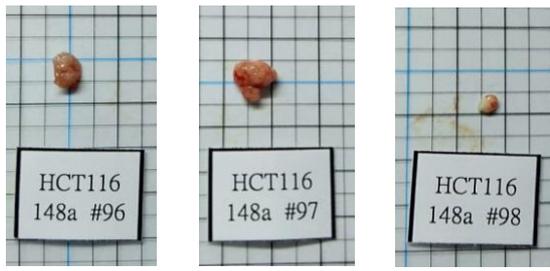

Tumor burden :

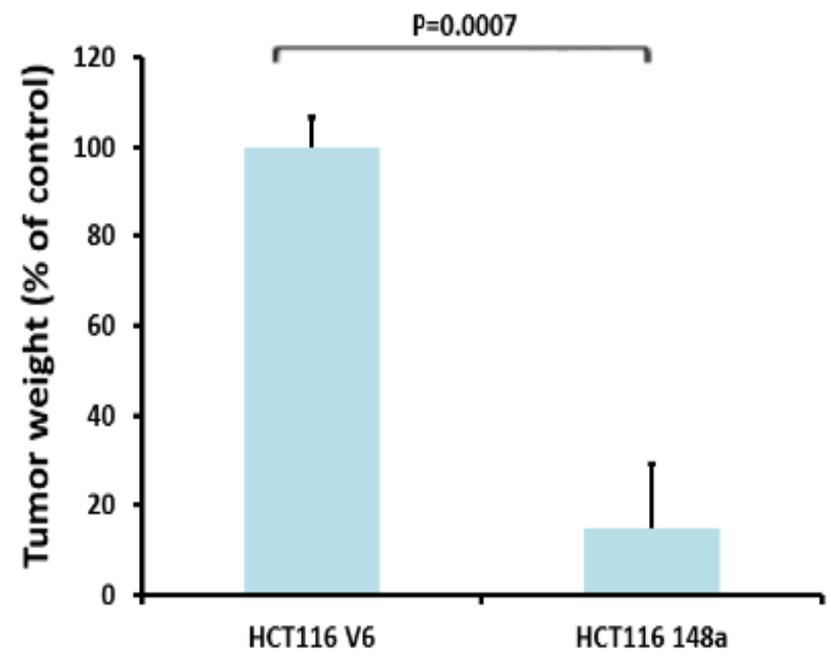

HCT116 V6

HCT116 148a

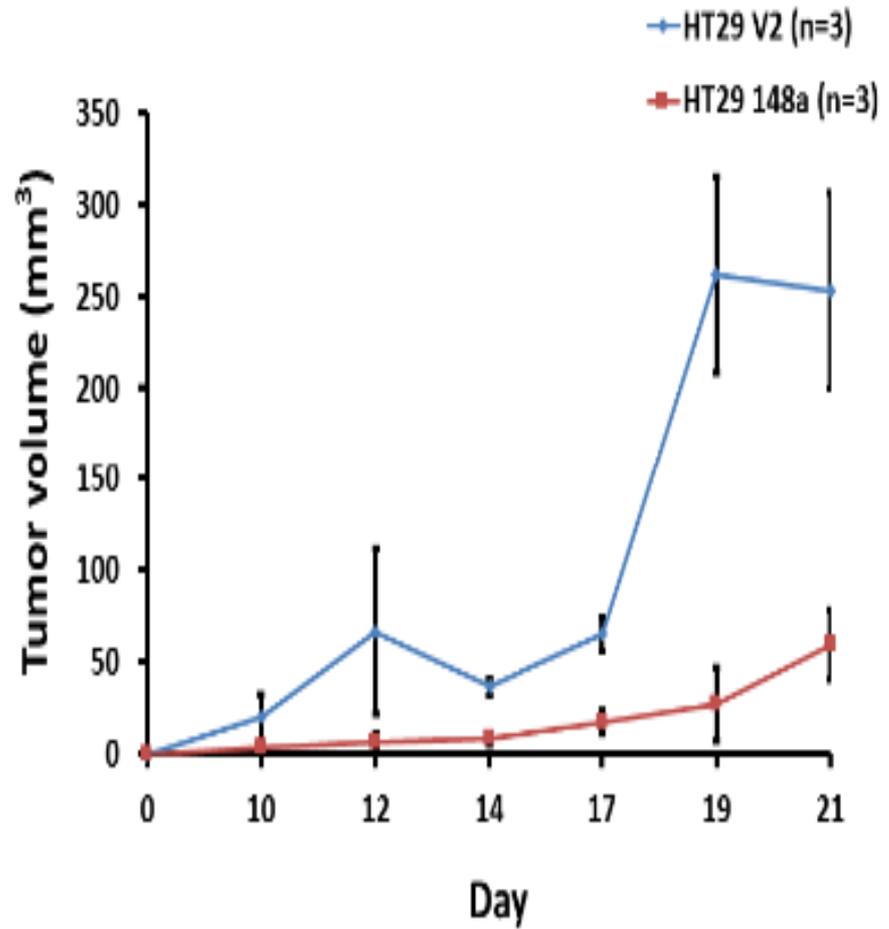

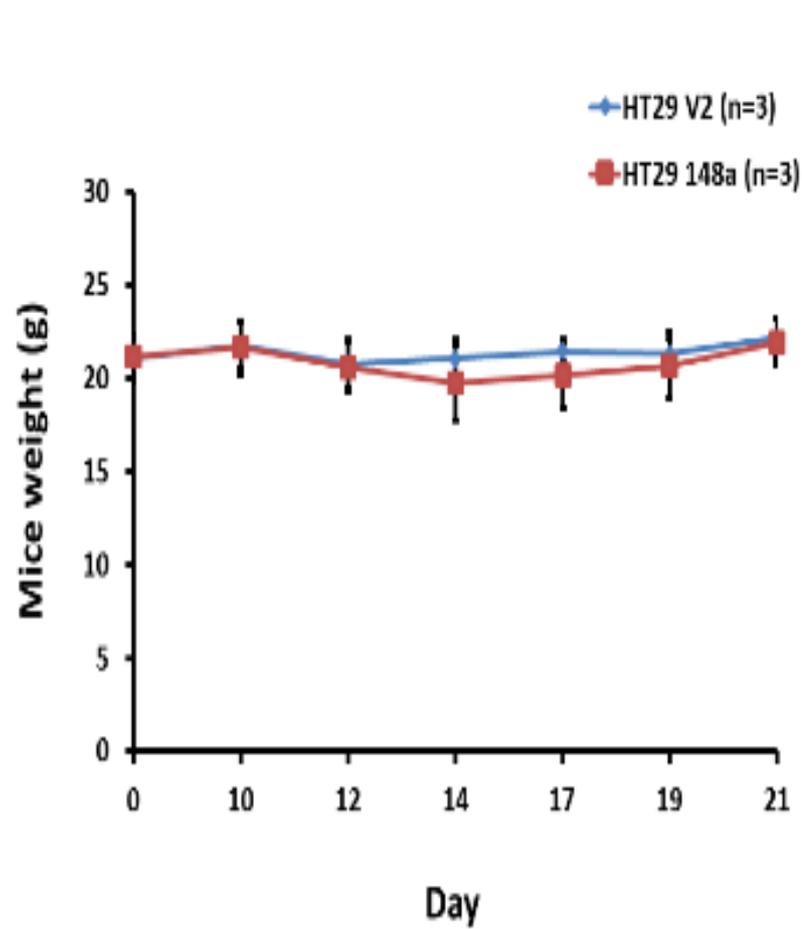

Tumor lumps were smaller in miR-148a group

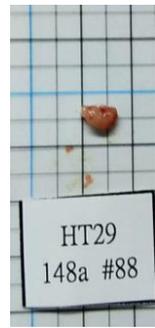

B HT 29 (N=3)

Animal model : HT29

Tumor burden :

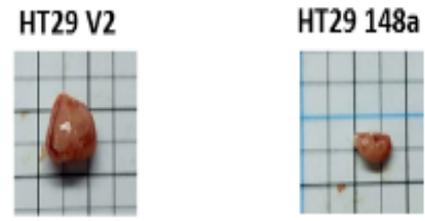

HT29 V2

HT29 148a

Tumor lumps were smaller in miR-148a group

P=0.0037
