Time since diagnosis	Per 10 years	-0.01	0.92	0.03	0.81	-0.04	0.74						
CRT dose	Per 10 Gy	0.14	0.42	-0.14	0.30	-0.01	0.97						
IT Methotrexate	Per 100 ml	-0.02	0.76	-0.03	0.55	-0.05	0.34						
HDIV Methotrexate	Yes v. No	-0.14	0.45	0.16	0.32	0.06	0.72						

Note: Only outcomes that demonstrated significant differences between survivors with GHD versus without GHD on univariate tests were included in multivariable models.

Abbreviations: GHD = growth hormone deficiency, CRT = cranial radiation therapy, IT = intrathecal (either single methotrexate or methotrexate combined with cytarabine and hydrocortisone), HDIV = high-dose intravenous.

Supplemental Table 2. Comparison of neurocognitive outcomes between survivors with growth hormone deficiency diagnosed during childhood versus adulthood.

	Diagnosed during Adulthood (N=241)	Diagnosed during Childhood (N=57)	P-value
	Mean (95% CL)	Mean (95% CL)	
Neurocognitive – Direct Testing
