Adjusted for: age, smoking, alcohol intake, postmenopausal hormone use (NHS), physical activity, family history of diabetes, family history of mi, family history of cancer, multivitamin use, ethnicity, aspirin use, baseline history of hypertension and hypercholesterolemia, intakes of whole grains, fruit, vegetables, red and processed meat, total energy and BMI. ASB and SSB were mutually adjusted.

**Supplemental Figure 1:** Mean intake of SSB (panel A-solid lines) and ASB (panel B-dashed lines) in the Nurses' Health Study (NHS) and Health Professionals Follow-up Study (HPFS) by Food Frequency Questionnaire (FFQ)

Panel A

Panel B
