*ELOVL2*, elongase gene 2 of the very long chain fatty acid; PUFA, long chain polyunsaturated fatty acids; LA, linoleic acid; GLA,  $\gamma$ -linolenic acid; DGLA, dihomo  $\gamma$ -linolenic acid; ARA, arachidonic acid; DTA, docosatetraenoic acid; ALA,  $\alpha$ -linolenic acid; EPA, eicosapentaenoic acid; DHA, docosahexaenoic acid.

<sup>a</sup> Q means the quartile level of DHA intake: Q<sub>1</sub>: <14.58 mg/day (reference); Q<sub>2</sub>: 14.58–43.15 mg/day; Q<sub>3</sub>: 43.16–118.82 mg/day; Q<sub>4</sub>:  $\geq$ 118.82 mg/day.

<sup>b</sup> H means the type of haplotype in *ELOVL2*; H<sub>1</sub>: A-C-C (reference); H<sub>2</sub>: A-G-G, H<sub>3</sub>: G-C-C, H<sub>4</sub>: A-C-G; Haplotypes are named according to its frequency.

<sup>c</sup> Q-H means the effect of interaction between DHA intake and haplotype on PUFA levels compared with reference.
