

Supplemental Figure 2. Mutation of HER2 to obscure binding of Trastuzumab and Pertuzumab. A.) EPH4 cells were stably transfected with wild type HER2 or a form of HER2 with 7 point mutations within the Trastuzumab/Pertuzumab binding site. Parental EPH4 cells do not express HER2 and serve as a negative control. Antibodies or serum from HER2 vaccinated (positive control) or GFP vaccinated (negative control) mice were used for the cell based ELISA.
