

## Supplementary information

**Table S1:** lists of genes differentially up- or down-regulated, with an absolute value of log<sub>2</sub>-fold-change greater than 1, specifically in Sf9-LD<sub>50</sub> (sheet #1), specifically in Sf9-LD<sub>80</sub> (sheet #2) or common to both resistant cell lines (sheet #3). Genes are ordered using the fold change of expression from the most up-regulated to the most down-regulated.
