

Figure S2 legend. Serum levels of FITC-dextran in wild-type, TLR3-deficient, and MDA5-deficient mice. Mice were challenged with vehicle or inhaled poly:I:C (pIC) for three days, and then injected i.p. with 4 kDa FITC-dextran (5 mg) one hour prior to sacrifice. Serum was collected and analyzed for relative fluorescence as in the Methods section. n.s. = not-significant. ## p < 0.01.
