Figure S1. Comparison of sMG effect on proliferation between confluent and non-confluent cultures.

**Figure S1.** Comparison of sMG effect on proliferation between confluent and non-confluent cultures. 3 days of sMG decreased cell proliferation by 53% in non-confluent cultures ( $1,800\text{cell/cm}^2$ ,  $p<0.001$ ,  $n=3/\text{grp}$ ). There was no difference in cell proliferation when cells plated into confluent cultures ( $18,000\text{ cell/cm}^2$ ). Group comparisons were made using unpaired T-test (Figure 1b) \*  $p<0.05$ , \*\*  $p<0.01$ , \*\*\*  $p<0.001$ , against control and each other.

Figure S2. F-actin morphology of sMG treated MSCs

**Figure S2.** Representative images of actin morphology between control and sMG treated MSCs. Following sMG treatment, F-actin and nucleus were stained via Phalloidin ( Green) and Hoechst 33342 (Blue) and nuclear height was measured via confocal microscopy. Apical actin structure appeared disorganized in sMG groups.

Table.S1: Differences between Control, sMG, sMG+LIV as determined by proteomics

Accession	Description	Group Comparisons (fold of change)						
		Normalized PSMs		sMG	+LIV	vs Ctrl	vs sMG	vs Ctrl
		Ctrl	sMG					
P46061	Ran GTPase-activating protein	8.79	1.75	5.17	0.20	2.95	0.59
