**Description**

The growth ratios for the initial strain set profiled against geldanamycin, radicicol and novobiocin and depicted in the Figure S2 heatmap.

The fitness values and time to reach 0.8 for strains used in Figure S1.

Example of the optical density curves for 8 strains

Cka2 deletion strain optical density data and associated graph

COG6 deletion strain optical density data and associated graph

CPR6 deletion strain optical density data and associated graph

CPR7 deletion strain optical density data and associated graph

ECI1 deletion strain optical density data and associated graph

GCN2 deletion strain optical density data and associated graph

\* Growth Ratio was normalized to wildtype. The ratio was determined at each drug concentration as follows:

Ratio = Deletion strain OD600 0.8(corrected for fitness value)/Wildtype strain OD600 0.8

The Growth Ratio was subtracted by 1 to depict all the ratios relative to wildtype for visualization on the heatmap (wildtype ratio = 1 for each con

dition)

## TIME TAKEN TO REACH OD600 of 0.8
