

Table S15. Among HCV-seropositive transplant candidates: Survival benefit associated with kidney transplantation from either an HCV-seropositive or HCV-seronegative donor by three years after transplantation, compared to remaining on the waiting list, (N=2287)

	HR	95% CI	P value
Waitlist	Ref		
HCV-seronegative donor	0.17	0.07-0.42	<0.001
HCV-seropositive donor	0.83	0.50-1.40	0.502

Model also adjusted for age, race, gender, BMI, dialysis modality, primary insurance payer, median neighborhood income category, PRA, pre-waitlist dialysis days, prior kidney transplant, comorbidities of cardiovascular disease, diabetes, and liver disease, albumin categories, hemoglobin categories, platelet categories; year of wait listing interaction with time
