

Supplementary Table 1. Microsatellite instability status in stage I, II, and III patients

Variable	LCC (n = 672)	RCC (n = 530)	P-value
Stage I			<0.001
MSS/MSI-L	89 (93.7)	59 (72.0)	
MSI-H	6 (6.3)	23 (28.0)	
Stage II			<0.001
MSS/MSI-L	236 (90.1)	170 (74.9)	
MSI-H	26 (9.9)	57 (25.1)	
Stage III			0.021
MSS/MSI-L	269 (93.7)	163 (87.6)	
MSI-H	18 (6.3)	23 (12.4)	

Values are presented as number (%).

LCC, left-sided colon cancer; RCC, right-sided colon cancer; MSS, microsatellite stable;

MSI-L, microsatellite instability-low; MSI-H, microsatellite instability-high.
